- Profile analysis
  - Summary of aggregated metrics
    - ▶ per function/call-path and/or per process/thread
  - Most tools (can) generate and/or present such profiles
    - ▶ but they do so in *very* different ways, often from event traces!
  - e.g., mpiP, ompP, TAU, **Scalasca**, Sun Studio, Vampir, ...
- Time-line analysis
  - Visual representation of the space/time sequence of events
  - Requires an execution trace
  - e.g., Vampir, Paraver, Sun Studio Performance Analyzer, ...
- Pattern analysis
  - Search for characteristic event sequences in event traces
  - Can be done manually, e.g., via visual time-line analysis
  - Can be done automatically, e.g., KOJAK, **Scalasca**

2

- Idea
  - Automatic search for patterns of inefficient behaviour
  - Classification of behaviour & quantification of significance

Low-level event trace → Analysis → High-level result ≡ (Property, Call path, Location)
  - Guaranteed to cover the entire event trace
  - Quicker than manual/visual trace analysis
  - Parallel replay analysis exploits memory & processors to deliver scalability

- Overview
  - Helmholtz Initiative & Networking Fund project started in 2006
  - Headed by Prof. Felix Wolf (JSC/RWTH/GRS-Sim)
  - Follow-up to pioneering KOJAK project (started 1998)
    - ▶ Automatic pattern-based trace analysis

- Objective
  - Development of a **scalable** performance analysis toolset
  - Specifically targeting **large-scale** parallel applications
    - ▶ such as those running on BlueGene/P or Cray XT
      with 10,000s to 100,000s of processes
  - Latest release in February 2010: Scalasca v1.3
    - ▶ Available on POINT/VI-HPS Parallel Productivity Tools Live-DVD
    - ▶ Download from www.scalasca.org

- Open source, New BSD license
- Portable
  - BG/P, BG/L, IBM SP & blade clusters, Cray XT, SGI Altix, NEC SX, SiCortex, Solaris & Linux clusters, ...
- Supports parallel programming paradigms & languages
  - MPI, OpenMP & hybrid OpenMP/MPI
  - Fortran, C, C++
- Integrated instrumentation, measurement & analysis toolset
  - Automatic and/or manual customizable instrumentation
  - Runtime summarization (aka profiling)
  - Automatic event trace analysis
  - Analysis report exploration & manipulation

program
sources

compiler

executable

application + MPI library

- Application code compiled & linked into executable using MPICC/CXX/FC
- Launched with MPIEXEC
- Application processes interact via MPI library

program sources

compiler | **instrumenter**

instrumented executable

application + **measurement lib**
- Automatic/manual code instrumenter
- Program sources processed to add instrumentation and measurement library into application executable
- Exploits MPI standard profiling interface (PMPI) to acquire MPI events

Measurement runtime summarization
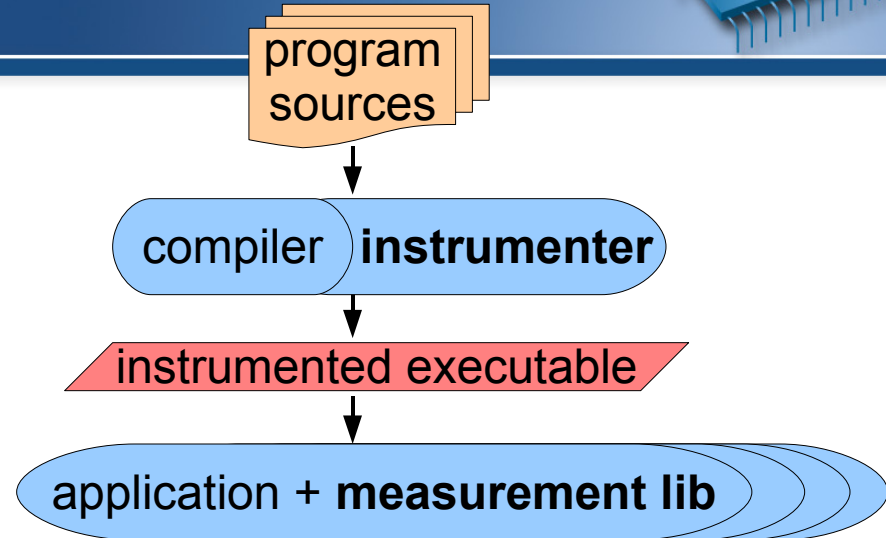

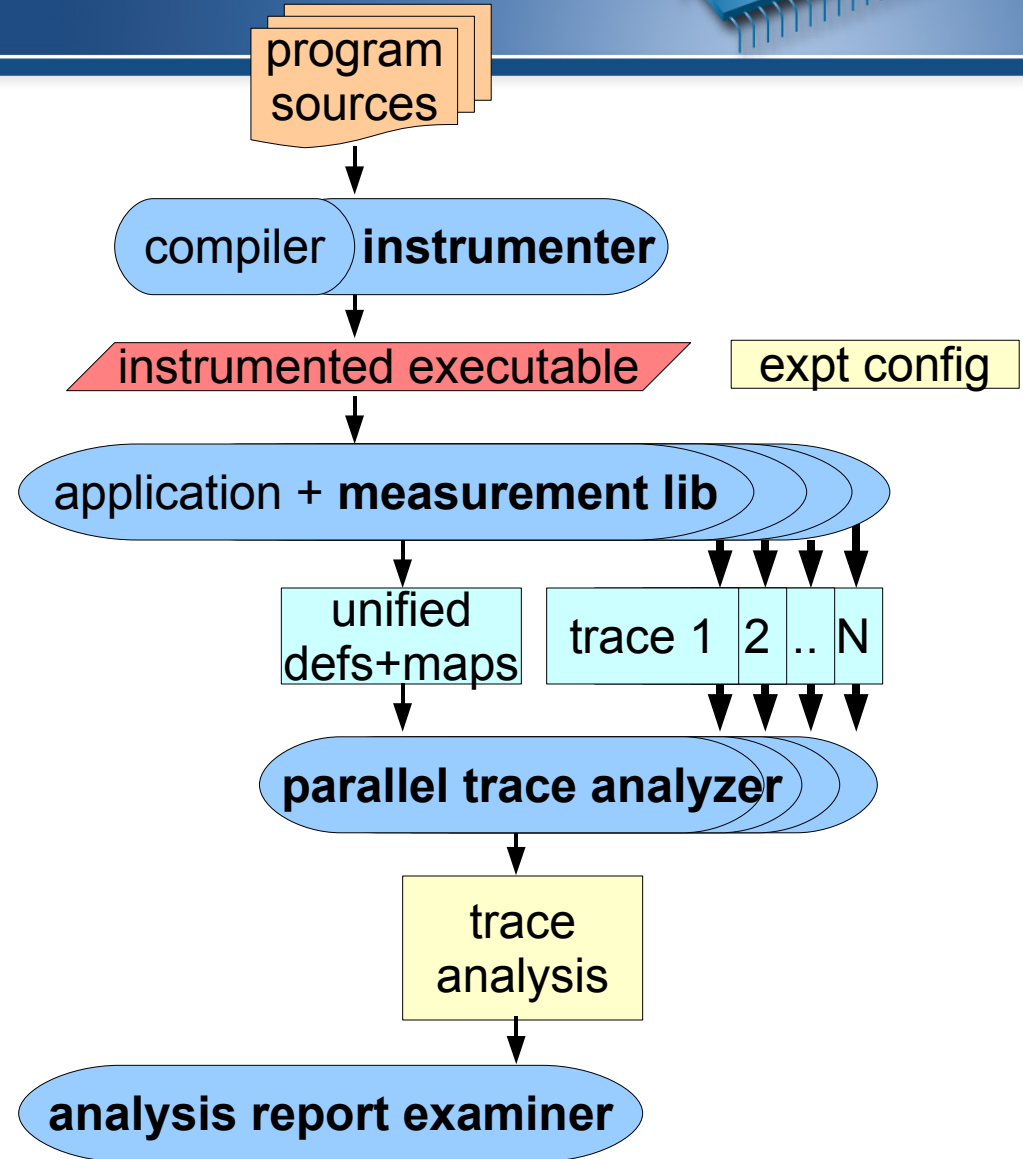

- Measurement library manages threads & events produced by instrumentation

- Measurements summarized by thread & call-path during execution

- Analysis report unified & collated at finalization

- Presentation of summary analysis

program sources

→

summary analysis

↓

analysis report examiner
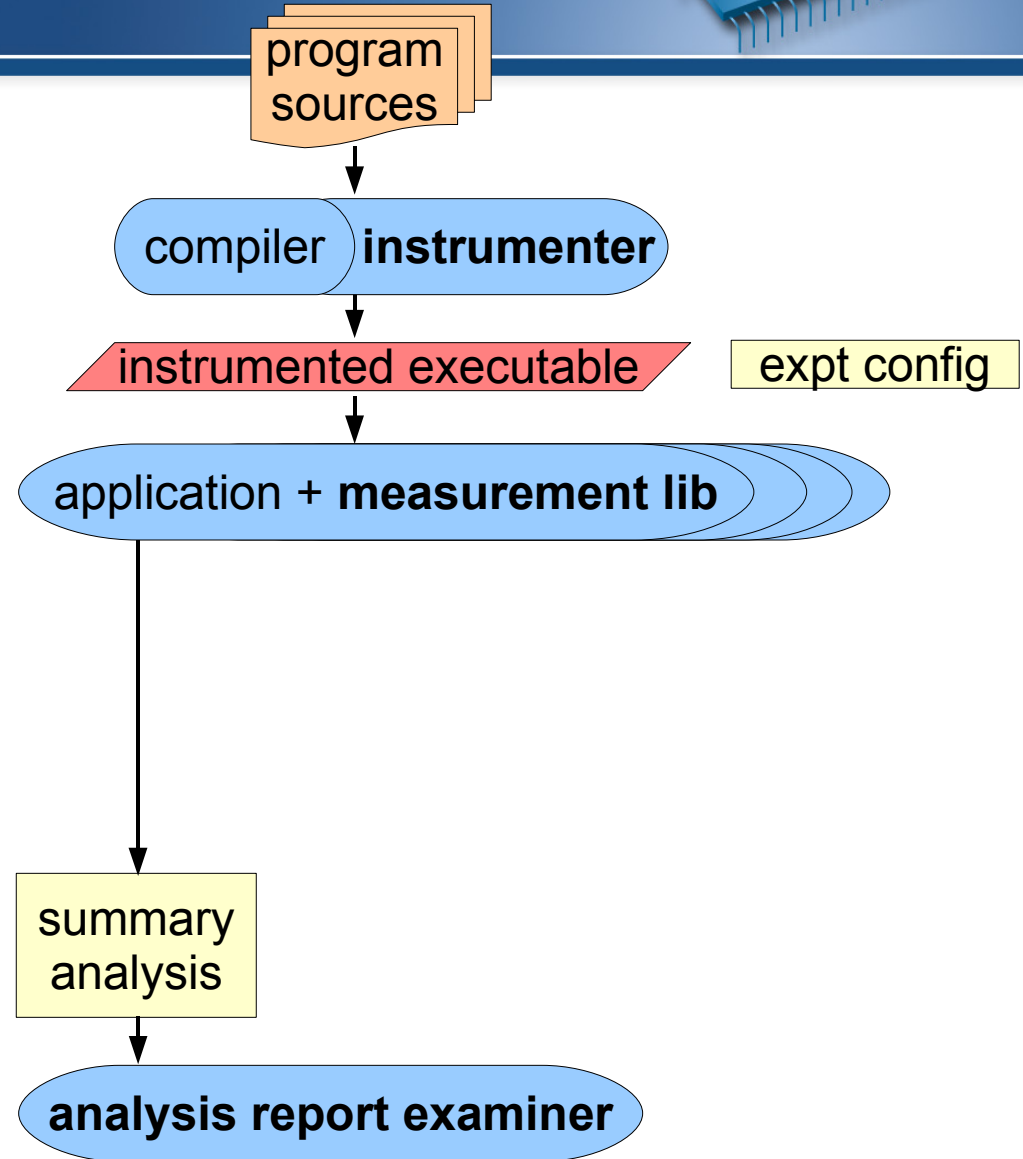

- During measurement time-stamped events buffered for each thread
- Flushed to files along with unified definitions & maps at finalization
- Follow-up analysis replays events and produces extended analysis report
- Presentation of analysis report

program sources → compiler **instrumenter** → instrumented executable | expt config → application + **measurement lib** → unified defs+maps | trace 1 2 .. N → **parallel trace analyzer** → trace analysis → **analysis report examiner**
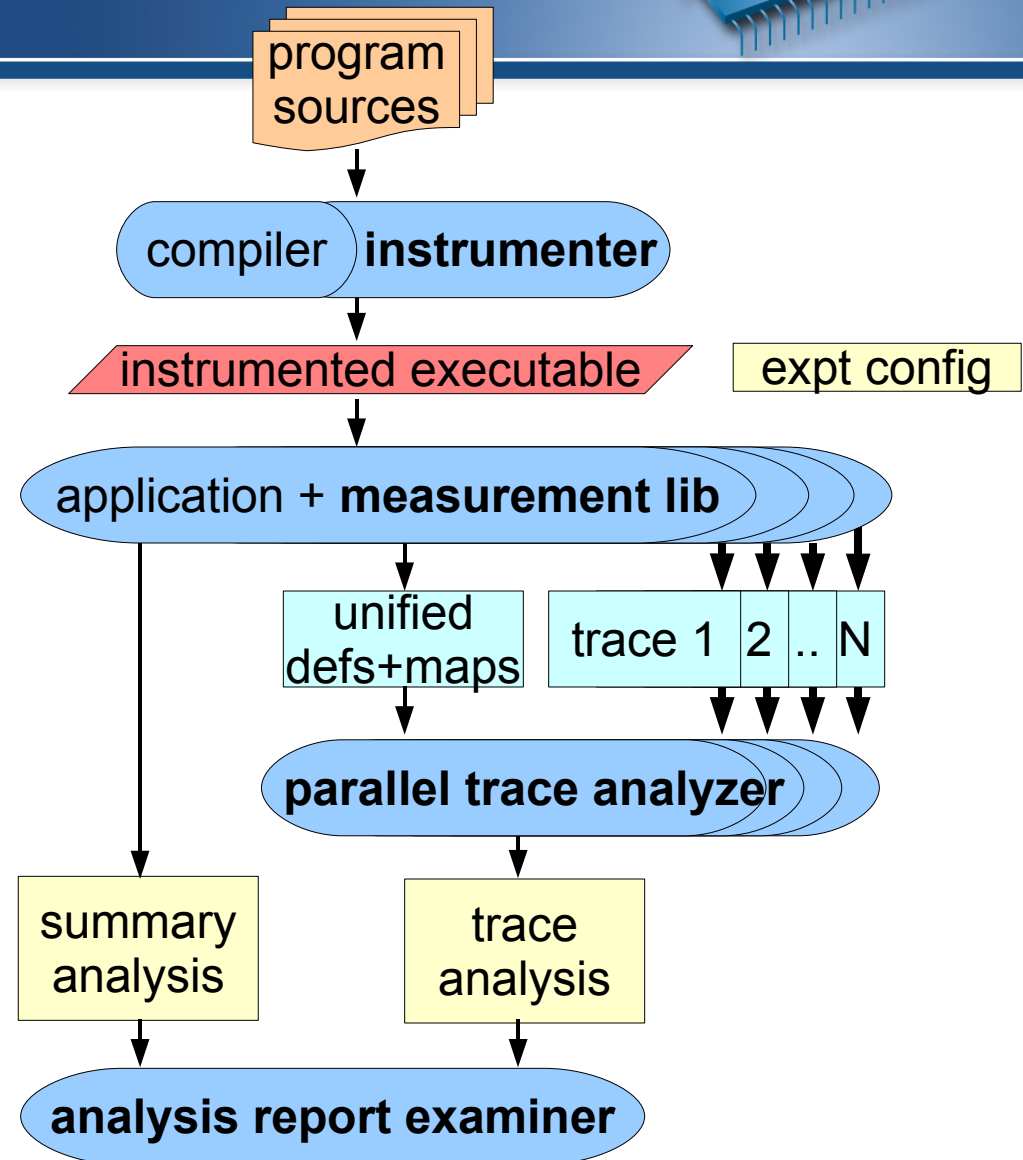

Generic parallel tools architecture

- Automatic/manual code instrumenter

- Measurement library for runtime summary & event tracing

- Parallel (and/or serial) event trace analysis when desired

- Analysis report examiner for interactive exploration of measured execution performance properties

analysis report examiner

- Measurement & analysis runtime system
  - Manages runtime configuration and parallel execution
  - Configuration specified via EPIK.CONF file or environment
    - ▸ epik_conf reports current measurement configuration
  - Creates experiment archive (directory): **epik_<title>**
  - Optional runtime summarization report
  - Optional event trace generation (for later analysis)
  - Optional filtering of (compiler instrumentation) events
  - Optional incorporation of HWC measurements with events
    - ▸ via PAPI library, using PAPI preset or native counter names
- Experiment archive directory
  - Contains (single) measurement & associated files (e.g., logs)
  - Contains (subsequent) analysis reports

- One command for everything

  % **scalasca**

  Scalasca 1.3

  Toolset for scalable performance analysis of large-scale apps

  usage: scalasca [-v][-n] {action}

  1. prepare application objects and executable for measurement:
     scalasca *-instrument* <compile-or-link-command>   # **skin**
  2. run application under control of measurement system:
     scalasca *-analyze* <application-launch-command>   # **scan**
  3. post-process & explore measurement analysis report:
   scalasca *-examine* <experiment-archive|report>   # **square**

  [-h] show quick reference guide (only)

- Automatic instrumentation of OpenMP & POMP directives via source pre-processor
  - Parallel regions, worksharing, synchronization
  - Currently limited to OpenMP 2.5
    - ▶ No special handling of guards, dynamic or nested thread teams
  - Configurable to disable instrumentation of locks, etc.
  - Typically invoked internally by instrumentation tools
- Used by Scalasca/Kojak, ompP, TAU, VampirTrace, etc.
  - Provided with Scalasca, but also available separately
    - ▶ OPARI 1.1 (October 2001)
    - ▶ OPARI 2.0 currently in development

- Parallel program analysis report exploration tools
  - Libraries for XML report reading & writing
  - Algebra utilities for report processing
  - GUI for interactive analysis exploration
    - ▶ requires Qt4 or wxGTK widgets library
    - ▶ can be installed independently of Scalasca instrumenter and measurement collector/analyzer, e.g., on laptop or desktop
- Used by Scalasca/Kojak, Marmot, ompP, PerfSuite, etc.
  - Analysis reports can also be viewed/stored/analyzed with TAU Paraprof & PerfExplorer
  - Provided with Scalasca, but also available separately
    - ▶ CUBE 3.3 (February 2010)

- Representation of values (severity matrix) on three hierarchical axes
  - Performance property (metric)
  - Call-tree path (program location)
  - System location (process/thread)

- Three coupled tree browsers

- CUBE3 displays severities
  - As value: for precise comparison
  - As colour: for easy identification of hotspots
  - Inclusive value when closed & exclusive value when expanded
 - Customizable via display mode
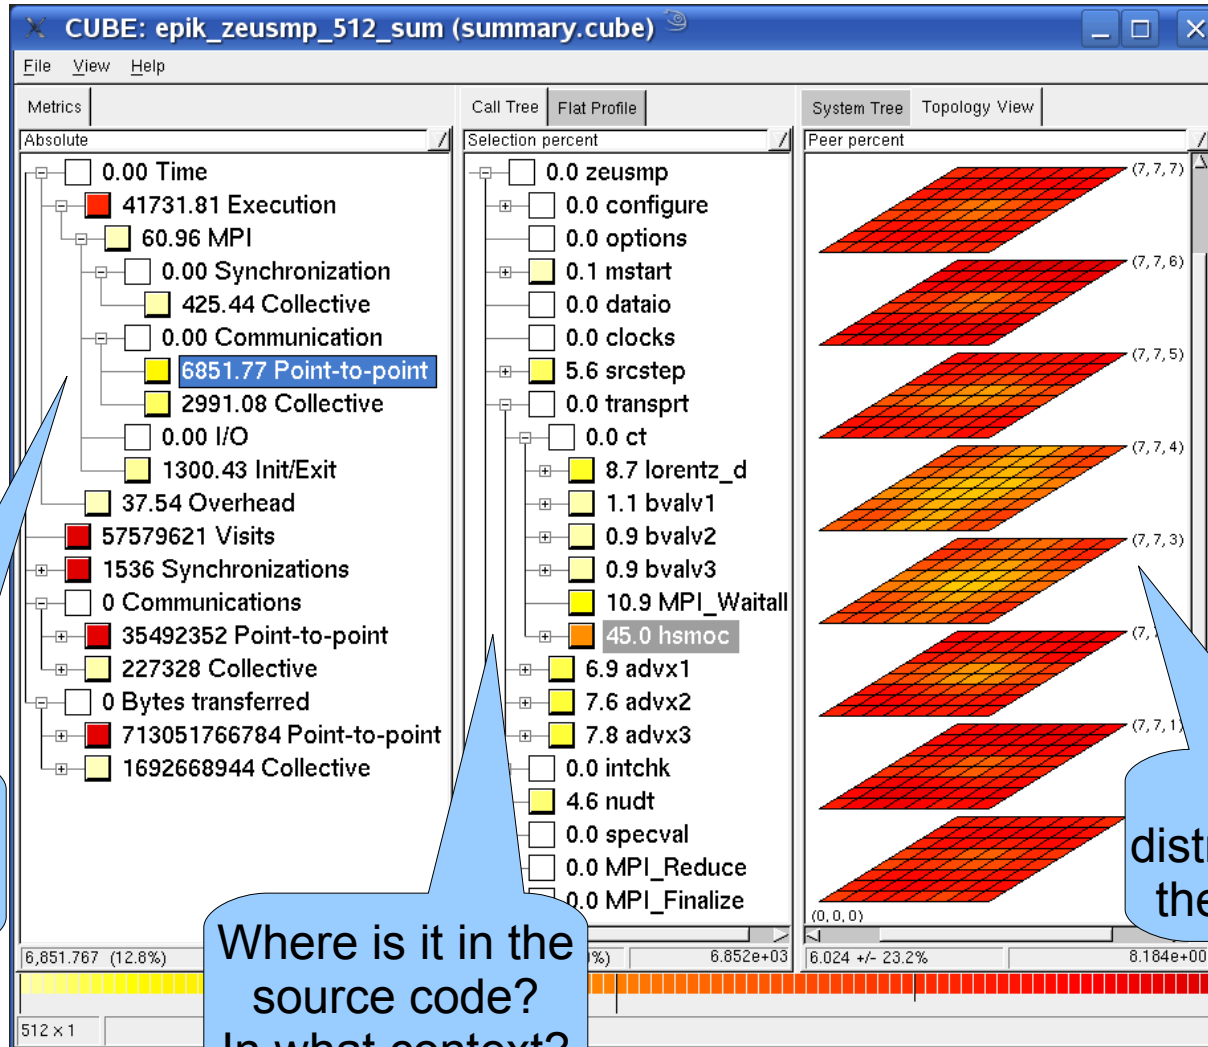

Additional metrics determined from trace

- Computational astrophysics
  - (magneto-)hydrodynamic simulations on 1-, 2- & 3-D grids
  - part of SPEC MPI2007 1.0 benchmark suite (132.zeusmp2)
  - developed by UCSD/LLNL
  - >44,000 lines Fortran90 (in 106 source modules)
  - provided configuration scales to 512 MPI processes
- Run with 512 processes on JUMP
  - IBM p690+ eServer cluster with HPS at JSC
- Scalasca summary and trace measurements
  - ~5% measurement dilation (full instrumentation, no filtering)
  - 2GB trace analysis in 19 seconds
  - application's 8x8x8 grid topology automatically captured from MPI Cartesian

- 12.8% of time spent in MPI point-to-point communication
- 45.0% of which is on program callpath `transprt/ct/hsmoc`
- With 23.2% std dev over 512 processes
- Lowest values in 3rd and 4th planes of the Cartesian grid
- MPI point-to-point communication time separated into transport and Late Sender fractions

- Late Sender situations dominate (57%)

- Distribution of transport time (43%) indicates congestion in interior of grid
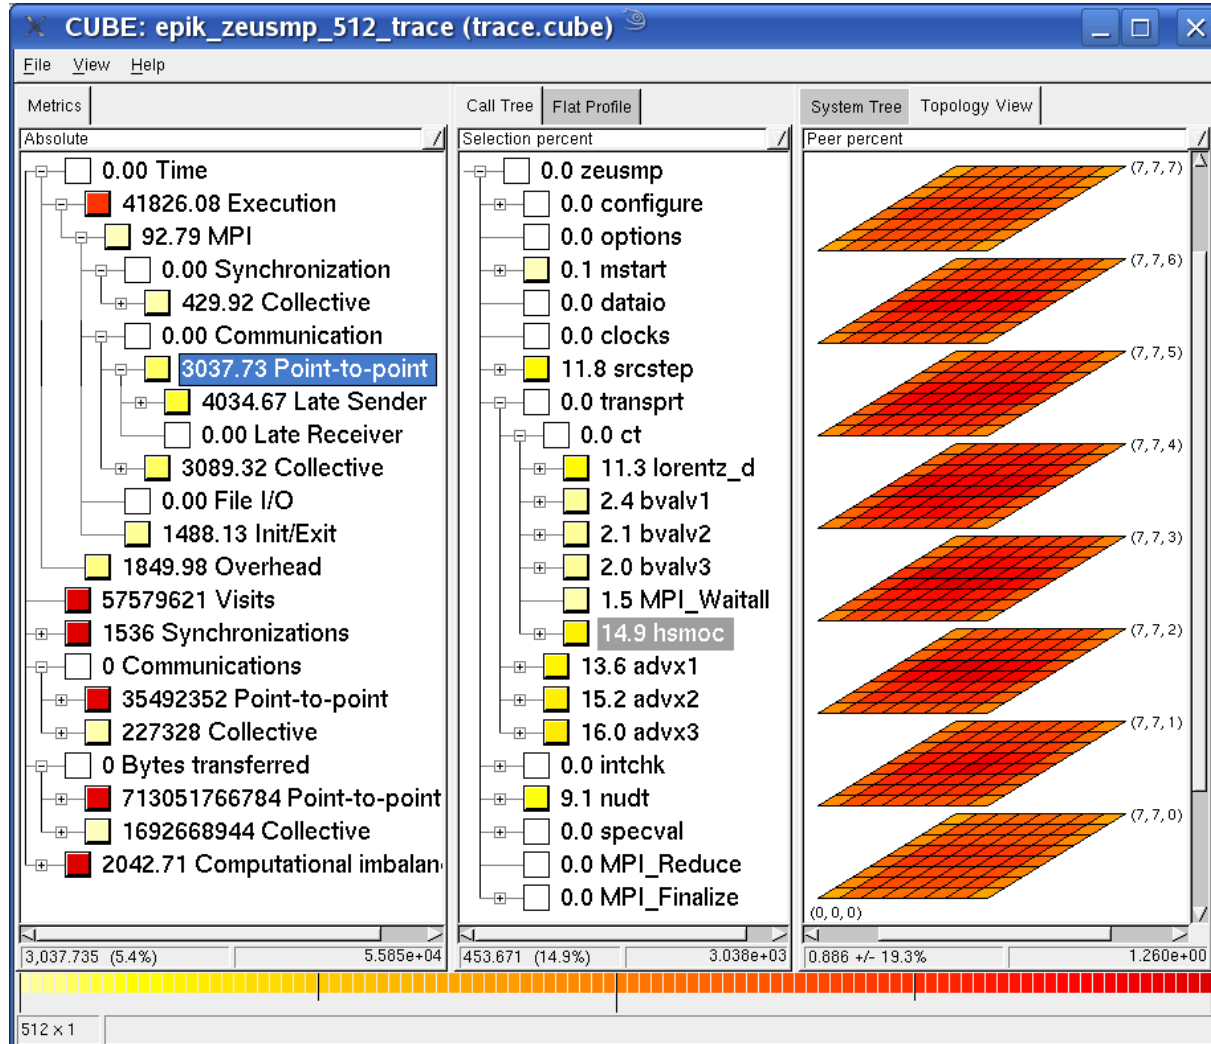

- Automatic function instrumentation (and filtering)
  - GCC, IBM, Intel, PathScale & PGI compilers
  - optional PDToolkit selective instrumentation (when available) and manual instrumentation macros/pragmas/directives
- MPI measurement & analyses
  - scalable runtime summarization & event tracing
  - only requires application executable re-linking
  - P2P, collective, RMA & File I/O operation analyses
- OpenMP measurement & analysis
  - requires (automatic) application source instrumentation
  - thread management, synchronization & idleness analyses
- Hybrid OpenMP/MPI measurement & analysis
  - combined requirements/capabilities

- Improved configure/installation
- Consistent instrumentation selection
  - automatic (compiler/pdt) and/or manual (pomp/user)
- Support for using PDToolkit to instrument sources
  - selective instrumentation of source files and routines
- Measurement configuration of MPI event wrappers
  - specify desired categories of events, e.g., P2P, COLL, RMA
- MPI RMA (one-sided communication) analysis
- Improved OpenMP (and hybrid) measurement & analysis
  - specify desired number of threads: ESD_MAX_THREADS
  - consistent automatic analyses of traces
- Improved documentation of analysis reports

- Instrumentation
  - Separate OpenMP instrumenter (OPARI) distribution
  - Scalasca source instrumentation via TAU/PDToolkit
  - Adapter for VT manual instrumentation macros
  - TAU instrumentation with Scalasca measurement libraries
- Trace utilities
  - Trace conversion utilities for VT/OTF, Paraver, JumpShot
  - Vampir visualization of Scalasca traces (without conversion)
- Analysis report utilities
  - Separate report generation/manipulation library and GUI (CUBE3) distribution
  - Alternative presentation with TAU Paraprof/PerfExplorer

- Part of Unified Tool Environment (UNITE) bundle
