Hands-on: *Archer* Cray XC30 NPB-MZ-MPI / bt-mz_C.8

VI-HPS Team

Tutorial exercise objectives

- Familiarise with usage of VI-HPS tools
 - complementary tools' capabilities & interoperability
- Prepare to apply tools productively to your applications(s)
- Exercise is based on a small portable benchmark code
 - unlikely to have significant optimisation opportunities
- Optional (recommended) exercise extensions
 - analyse performance of alternative configurations
 - investigate effectiveness of system-specific compiler/MPI optimisations and/or placement/binding/affinity capabilities
 - investigate scalability and analyse scalability limiters
 - compare performance on different HPC platforms
 - **...**

Compiler and MPI modules (Archer Cray XC30)

Select appropriate PrgEnv (cray, gnu or intel: gnu suggested/assumed)

```
% module switch PrgEnv-cray PrgEnv-gnu % module switch gcc/4.9.3
```

Set-up and load the required VI-HPS tools modules (only needed later)

```
% module load scorep/2.0.2 scalasca/2.3.1 cube/4.3.4
Score-P version 2.0.2-intel loaded
Scalasca version 2.3.1-intel loaded
Cube version 4.3.4 loaded
```

Copy tutorial sources to your \$WORK directory

```
% cd $WORK
% tar zxvf /work/y14/shared/tutorial/NPB3.3-MZ-MPI.tar.gz
% cd NPB3.3-MZ-MPI
```

NPB-MZ-MPI Suite

- The NAS Parallel Benchmark suite (MPI+OpenMP version)
 - Available from:

http://www.nas.nasa.gov/Software/NPB

- 3 benchmarks in Fortran77
- Configurable for various sizes & classes
- Move into the NPB3.3-MZ-MPI root directory

```
% ls
bin/ common/ jobscript/ Makefile README.install SP-MZ/
BT-MZ/ config/ LU-MZ/ README README.tutorial sys/
```

- Subdirectories contain source code for each benchmark
 - plus additional configuration and common code
- The provided distribution has already been configured for the tutorial, such that it is ready to "make" one or more of the benchmarks
 - but config/make.def may first need to be adjusted to specify appropriate PrgEnv compiler flags

NPB-MZ-MPI / BT: config/make.def

```
SITE- AND/OR PLATFORM-SPECIFIC DEFINITIONS.
# Configured for Cray with PrgEnv compiler-specific OpenMP flags
#COMPILER = -homp # Cray/CCE compiler

COMPILER = -fopenmp # GNU/GCC compiler

#COMPILER = -qopenmp # Intel compiler
                                                                             Uncomment COMPILER flags
                                                                             according to current PrgEnv
 The Fortran compiler used for MPI programs
                                                                                       Default (no instrumentation)
MPIF77 = ftn
# Alternative variant to perform instrumentation
#MPIF77 = scorep --user ftn
                                                                                     Hint: uncomment a compiler
# PREP is a generic preposition macro for instrumentation preparation
#MPIF77 = $(PREP) ftn
                                                                                     wrapper to do instrumentation
```

Building an NPB-MZ-MPI Benchmark

```
% make
       NAS PARALLEL BENCHMARKS 3.3
       MPI+OpenMP Multi-Zone Versions
 To make a NAS multi-zone benchmark type
       make <benchmark-name> CLASS=<class> NPROCS=<nprocs>
 where <benchmark-name> is "bt-mz", "lu-mz", or "sp-mz"
                    is "S", "W", "A" through "F"
       <class>
       <nprocs>
                  is number of processes
 [...]
* Custom build configuration is specified in config/make.def
* Suggested tutorial exercise configuration for HPC systems:
        make bt-mz CLASS=C NPROCS=8
   ******************
```

Type "make" for instructions

Building an NPB-MZ-MPI Benchmark

```
% make bt-mz CLASS=C NPROCS=8
make[1]: Entering directory `BT-MZ'
make[2]: Entering directory `sys'
cc -o setparams setparams.c -lm
make[2]: Leaving directory `sys'
../sys/setparams bt-mz 8 C
make[2]: Entering directory `../BT-MZ'
ftn -c -O3 -fopenmp
                          bt.f
ftn -c -O3 -fopenmp mpi setup.f
cd ../common; ftn -c -O3 -fopenmp
                                    print results.f
cd ../common; ftn -c -O3 -fopenmp
                                         timers.f
ftn -03 -fopenmp -o ../bin/bt-mz C.8 bt.o
initialize.o exact solution.o exact rhs.o set constants.o adi.o
 rhs.o zone setup.o x solve.o y solve.o exch qbc.o solve subs.o
 z solve.o add.o error.o verify.o mpi setup.o ../common/print results.o
 ../common/timers.o
make[2]: Leaving directory `BT-MZ'
Built executable ../bin/bt-mz C.8
make[1]: Leaving directory `BT-MZ'
```

- Specify the benchmark configuration
 - benchmark name: bt-mz, lu-mz, sp-mz
 - the number of MPI processes: NPROCS=8
 - the benchmark class (S, W, A, B, C, D, E): CLASS=**C**

Shortcut: % make suite

NPB-MZ-MPI / BT (Block Tridiagonal Solver)

- What does it do?
 - Solves a discretized version of the unsteady, compressible Navier-Stokes equations in three spatial dimensions
 - Performs 200 time-steps on a regular 3-dimensional grid
- Implemented in 20 or so Fortran77 source modules
- Uses MPI & OpenMP in combination
 - 8 processes each with 6 threads should be reasonable for 2 compute nodes of Archer
 - bt-mz_B.8 should run in less than 10 seconds
 - bt-mz_C.8 should run in around 20 seconds
 - execution times are typically much longer with PrgEnv-intel

NPB-MZ-MPI / BT Reference Execution

```
% cd bin
% cp ../jobscript/archer/run.pbs .
% less run.pbs
% qsub run.pbs
% cat run mzmpibt.o<job id>
NAS Parallel Benchmarks (NPB3.3-MZ-MPI) - BT-MZ MPI+OpenMP Benchmark
Number of zones:
Iterations: 200 dt: 0.000300
Number of active processes: 8
Total number of threads: 48 ( 6.0 threads/process)
Time step 1
Time step
            20
 [...]
Time step 180
Time step 200
Verification Successful
BT-MZ Benchmark Completed.
Time in seconds = 18.78
```

Copy jobscript and launch as a hybrid MPI+OpenMP application

Hint: save the benchmark output (or note the run time) to be able to refer to it later

Tutorial Exercise Steps

- Edit config/make.def to adjust build configuration
 - Modify specification of compiler/linker: MPIF77
- Make clean and then build new tool-specific executable

```
% make clean
% make bt-mz CLASS=C NPROCS=8
Built executable ../bin.scorep/bt-mz_C.8
```

 Change to the directory containing the new executable before running it with the desired tool configuration

```
% cd bin.scorep
% cp ../jobscript/archer/scorep.pbs .
% qsub scorep.pbs
```
