

# Computer system and software environment INTI

Emmanuel OSERET

## Computer system: partitions

Partitions:

- **haswell (32 nodes) => main partition for this VI-HPS**
- sandy/vihps (25 nodes) => reservation inside sandy, **backup only**
- knl => for afternoons, if some participants want to try...

```
> ccc_mpinfo
```

PARTITION	STATUS	-----CPUS-----				-----NODES-----				MpC	CpN	SpN	CpS	TpC
		TOTAL	DOWN	USED	FREE	TOTAL	DOWN	USED	FREE					
<b>sandy</b>	<b>up</b>	<b>3552</b>	<b>0</b>	<b>2183</b>	<b>1369</b>	<b>222</b>	<b>0</b>	<b>138</b>	<b>84</b>	<b>4000</b>	<b>16</b>	<b>2</b>	<b>8</b>	<b>1</b>
<b>knl</b>	<b>up</b>	<b>544</b>	<b>0</b>	<b>272</b>	<b>272</b>	<b>8</b>	<b>0</b>	<b>4</b>	<b>4</b>	<b>1323</b>	<b>68</b>	<b>1</b>	<b>68</b>	<b>1</b>
skl	up	48	0	0	48	1	0	0	1	7916	48	2	24	1
<b>knl</b>	<b>up</b>	<b>884</b>	<b>0</b>	<b>0</b>	<b>884</b>	<b>13</b>	<b>0</b>	<b>0</b>	<b>13</b>	<b>1544</b>	<b>68</b>	<b>1</b>	<b>68</b>	<b>1</b>
<b>haswell</b>	<b>up</b>	<b>1024</b>	<b>0</b>	<b>0</b>	<b>1024</b>	<b>32</b>	<b>0</b>	<b>0</b>	<b>32</b>	<b>4000</b>	<b>32</b>	<b>4</b>	<b>8</b>	<b>1</b>
dgx	up	40	0	0	40	1	0	0	1	12500	40	2	20	1
atom	up	296	0	0	296	37	0	0	37	3625	8	1	8	1
armxg	up	352	0	0	352	44	0	0	44	7912	8	1	8	1

MpC: memory/core (MB), CpN: core/node, SpN: socket (NUMA node), CpS: core/socket, TpC: thread/core (always print 1)

## Haswell partition

---

Bi-sockets of E5-2698 v3 processors (Haswell-E, 16 cores / 32 threads per socket, 2.3 GHz)

Sub-NUMA mode => 2 NUMA nodes per socket

**128 GB RAM**

# Help !

---

Main commands and detailed documentation

```
> cat /etc/motd  
> machine.info
```

Quick reference card (summary of next slides):

[http://www.vi-hps.org/upload/material/tw26/INTI\\_quick\\_refv09.pdf](http://www.vi-hps.org/upload/material/tw26/INTI_quick_refv09.pdf)

## Use modules

---

Print available modules

```
> module avail  
> module avail mpi # filter to MPI modules
```

Print loaded modules

```
> module list
```

Load/unload modules

```
> module load/unload intel/16.0.3.210
```

## Submit jobs (1/3)

---

Interactive session (open a shell on a compute node)

```
> ccc_mprun -s -p haswell
```

Run a command (MPI application)

```
> ccc_mprun -p haswell -x -n 8 -c 4 ./bt.C8  
-x: request exclusive usage of allocated nodes  
-n: number of tasks to run  
-c: number of cores per task
```

Submit a job

```
> ccc_msub <jobscript>
```

## Submit jobs (2/3)

---

Review your pending/running jobs

```
> ccc_mpp -u mylogin
```

Cancel/kill a job

```
> ccc_mdel <job ID, as given by ccc_mpp>
```

Misc.:

- **do not execute mpirun** on a login node (use ccc\_mprun)
- sinfo, scancel, squeue can be used too (slurm)
- for outputs and intermediate results, prefer \$SCRATCHDIR

## Submit jobs (3/3)

---

Jobscript example (passed to ccc\_msub)

```
#!/bin/bash
#MSUB -x          # want to be alone on my node !
#MSUB -T 60       # max 60 seconds
#MSUB -q haswell # use the haswell partition
#MSUB -r btmz_impi_haswell      # job name
#MSUB -e btmz_impi_haswell.%I.out # stderr file name
#MSUB -o btmz_impi_haswell.%I.out # stdout file name
#MSUB -n 4 # nb tasks
#MSUB -c 8 # nb cores/task
set -x

module load ...
export OMP_NUM_THREADS=8
cd ...
ccc_mprun ...
```

## Backup reservation: sandy/vihps (if cannot use haswell)

---

### Command line

```
> ccc_mprun ... -p sandy -E "--reservation=vihps" ...
```

### Jobscript

```
#!/bin/bash
...
#MSUB -q sandy # use the sandy partition
#MSUB -E '--reservation=vihps'
...
```
