

# Score-P – A Joint Performance Measurement Run-Time Infrastructure for Periscope, Scalasca, TAU, and Vampir: Basic Usage

---

VI-HPS Team

# Performance engineering workflow

## Fragmentation of tools landscape

---

- Several performance tools co-exist
  - Separate measurement systems and output formats
- Complementary features and overlapping functionality
- Redundant effort for development and maintenance
  - Limited or expensive interoperability
- Complications for user experience, support, training

Vampir

VampirTrace  
OTF

Scalasca

EPILOG /  
CUBE

TAU

TAU native  
formats

Periscope

Online  
measurement

## Score-P functionality

---

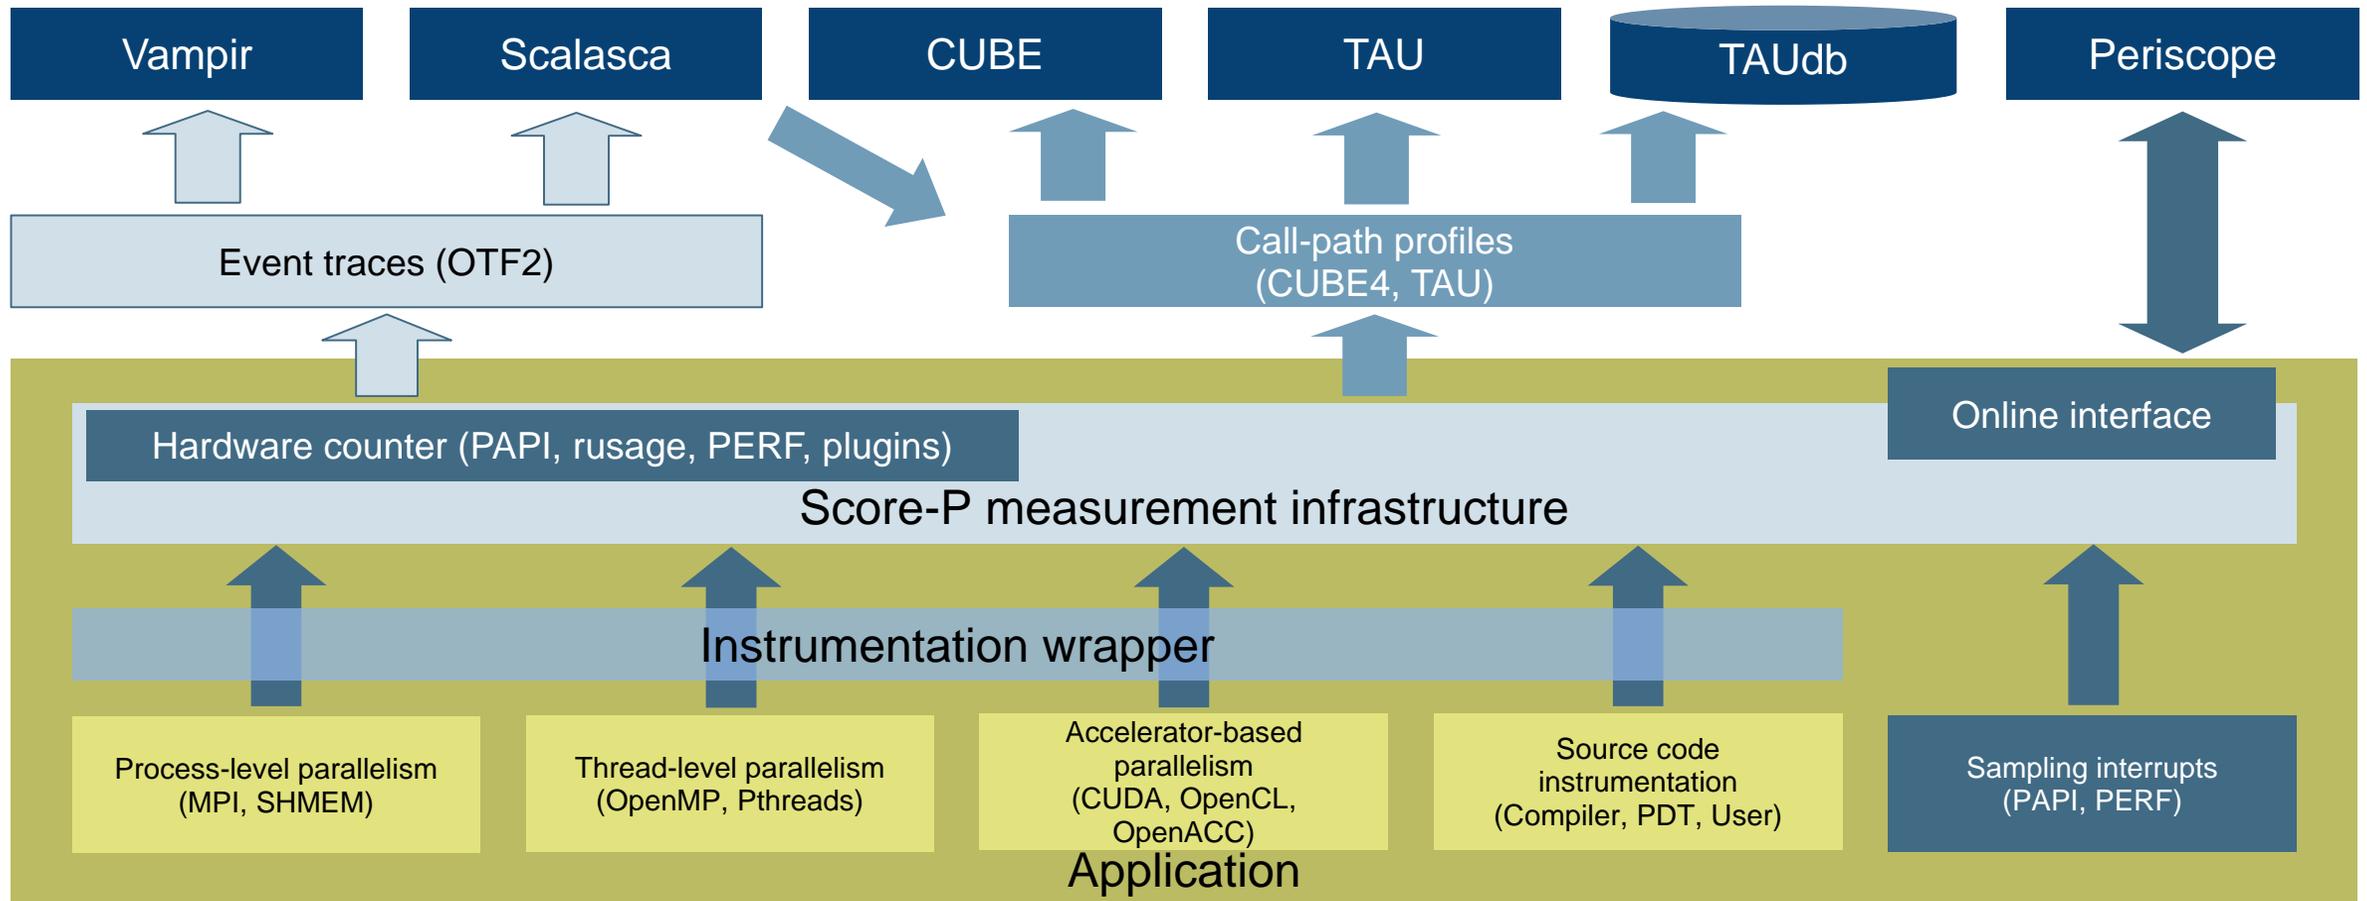

- Provide typical functionality for HPC performance tools
- Support all fundamental concepts of partner's tools
  
- Instrumentation (various methods)
- Flexible measurement without re-compilation:
  - Basic and advanced profile generation
  - Event trace recording
  - Online access to profiling data
  
- MPI/SHMEM, OpenMP/Pthreads, and hybrid parallelism (and serial)
- Enhanced functionality (CUDA, OpenCL, OpenACC, highly scalable I/O)

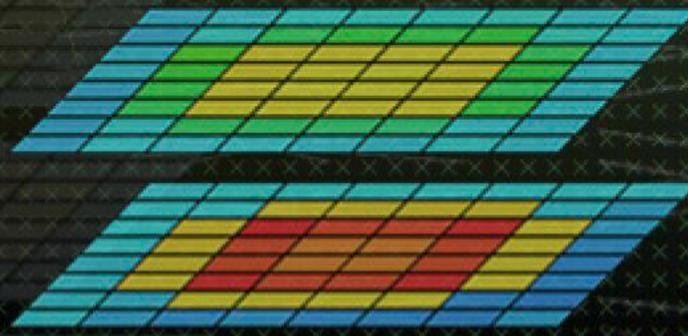

# Design goals

---

- Functional requirements
  - Generation of call-path profiles and event traces
  - Using direct instrumentation and sampling
  - Recording time, visits, communication data, hardware counters
  - Access and reconfiguration also at runtime
  - Support for MPI, SHMEM, OpenMP, Pthreads, CUDA, OpenCL, OpenACC and their valid combinations
- Non-functional requirements
  - Portability: all major HPC platforms
  - Scalability: petascale
  - Low measurement overhead
  - Robustness
  - Open Source: 3-clause BSD license

## Score-P overview

# Hands-on: NPB-MZ-MPI / BT

---

# Performance analysis steps

---

- 0.0 Reference preparation for validation
  
- 1.0 Program instrumentation
  - 1.1 Summary measurement collection
  - 1.2 Summary analysis report examination
  
- 2.0 Summary experiment scoring
  - 2.1 Summary measurement collection with filtering
  - 2.2 Filtered summary analysis report examination
  
- 3.0 Event trace collection
  - 3.1 Event trace examination & analysis

## Recap: Local installation

- VI-HPS tools installed system-wide

- Ensure that desired compiler and MPI modules (toolchain) are loaded first

```
% module list
Currently Loaded Modulefiles:
1) compil/x86_64 2) flavor/buildcompiler/intel/16 [...]
16) mpi/openmpi/1.8.8
```

Alternatively switch compilers  
(gcc) and/or MPI (intelmpi) ...

- Load correct module to add local tool installations to \$PATH (required for each shell session)

```
% module load datadir/formation cube/4.3.5 scorep/3.1 (scalasc
load module datadir/formation (Data Directory)
load module cube/4.3.5 (Cube)
load module scorep/3.1 (Score-P)
```

... but then you **must** specify the  
corresponding versions of tools!

- Move to working directory with tutorial exercise

```
% cd $SCRATCHDIR/NPB-3.3-MZ-MPI
% ls -F
BT-MZ/   Makefile   README.install   SP-MZ/   config/   sys/
LU-MZ/   README    README.tutorial  bin/     common/   jobscript/
```

## NPB-MZ-MPI / BT instrumentation

```
#-----  
# The Fortran compiler used for MPI programs  
#-----  
MPIF77 = mpif77  
  
# Alternative variants to perform instrumentation  
...  
MPIF77 = scorep --user mpif77  
...  
#MPIF77 = $(PREP) mpif77  
  
# This links MPI Fortran programs; usually the same as ${MPIF77}  
FLINK = $(MPIF77)  
...
```

- Edit config/make.def to adjust build configuration
  - Modify specification of compiler/linker: MPIF77

Uncomment the compiler wrapper specification

## NPB-MZ-MPI / BT instrumented build

```
% make clean

% make bt-mz CLASS=C NPROCS=8
cd BT-MZ; make CLASS=C NPROCS=8 VERSION=
make: Entering directory 'BT-MZ'
cd ../sys; cc -o setparams setparams.c -lm
../sys/setparams bt-mz 8 B
scorep --user mpif77 -c -O3 -fopenmp bt.f
[...]
cd ../common; scorep --user mpif77 -c -O3 -qopenmp timers.f
scorep --user mpif77 -O3 -qopenmp -o ../bin.scorep/bt-mz_C.8 \
bt.o initialize.o exact_solution.o exact_rhs.o set_constants.o \
adi.o rhs.o zone_setup.o x_solve.o y_solve.o exch_qbc.o \
solve_subs.o z_solve.o add.o error.o verify.o mpi_setup.o \
../common/print_results.o ../common/timers.o
Built executable ../bin.scorep/bt-mz_C.8
make: Leaving directory 'BT-MZ'
```

- Return to root directory and clean-up
- Re-build executable using Score-P compiler wrapper

# Measurement configuration: scorep-info

---

```
% scorep-info config-vars --full
SCOREP_ENABLE_PROFILING
  Description: Enable profiling
  [...]
SCOREP_ENABLE_TRACING
  Description: Enable tracing
  [...]
SCOREP_TOTAL_MEMORY
  Description: Total memory in bytes for the measurement system
  [...]
SCOREP_EXPERIMENT_DIRECTORY
  Description: Name of the experiment directory
  [...]
SCOREP_FILTERING_FILE
  Description: A file name which contain the filter rules
  [...]
SCOREP_METRIC_PAPI
  Description: PAPI metric names to measure
  [...]
SCOREP_METRIC_RUSAGE
  Description: Resource usage metric names to measure
  [...] More configuration variables ...
```

- Score-P measurements are configured via environmental variables

## Summary measurement collection

---

```
% cd bin.scorep
% cp ../jobscript/inti/scorep.msub .
% vi scorep.msub

[...]
export SCOREP_EXPERIMENT_DIRECTORY=scorep_bt-mz_sum
[...]

% ccc_msub scorep.msub
```

- Change to the directory containing the new executable before running it with the desired configuration
- Check settings

Leave other lines commented out for the moment

- Submit job

## Summary measurement collection

---

```
% less npb_btmz_scorep_<job_id>.oe

NAS Parallel Benchmarks (NPB3.3-MZ-MPI) - BT-MZ MPI+OpenMP \
>Benchmark

Number of zones:  16 x  16
Iterations: 200    dt:  0.000100
Number of active processes:    8

Use the default load factors with threads
Total number of threads:    48  ( 6.0 threads/process)

Calculated speedup =    47.97

Time step    1

[... More application output ...]
```

- Check the output of the application run

## BT-MZ summary analysis report examination

---

```
% ls
bt-mz_C.8  npb_btmz_scorep_<job_id>.oe  scorep_bt-mz_sum
% ls scorep_bt-mz_sum
profile.cubex  scorep.cfg

% module load cube/4.3.5
% cube scorep_bt-mz_sum/profile.cubex

[CUBE GUI showing summary analysis report]
```

- Creates experiment directory including
  - A record of the measurement configuration (scorep.cfg)
  - The analysis report that was collated after measurement (profile.cubex)
- Interactive exploration with Cube
