TAU Performance System®

- Parallel performance framework and toolkit
 - Supports all HPC platforms, compilers, runtime system
 - Provides portable instrumentation, measurement, analysis

TAU Performance System

- Instrumentation
 - Fortran, C++, C, UPC, Java, Python, Chapel
 - Automatic instrumentation
- Measurement and analysis support
 - MPI, OpenSHMEM, ARMCI, PGAS, DMAP
 - pthreads, OpenMP, OMPT interface, hybrid, other thread models
 - GPU, CUDA, OpenCL, OpenACC
 - Parallel profiling and tracing
 - Use of Score-P for native OTF2 and CUBEX generation
 - Efficient callpath profiles and trace generation using Score-P
- Analysis
 - Parallel profile analysis (ParaProf), data mining (PerfExplorer)
 - Performance database technology (TAUdb)
 - 3D profile browser

TAU Performance System

- TAU supports both sampling and direct instrumentation
- Memory debugging as well as I/O performance evaluation
- Profiling as well as tracing
- Interfaces with Score-P for more efficient measurements
- TAU's instrumentation covers:
 - Runtime library interposition (`tau_exec`)
 - Compiler-based instrumentation
 - Native generation of OTF2 traces (`TAU_TRACE=1`, `TAU_TRACE_FORMAT=otf2`)
 - Callsite instrumentation with profiles and traces (`TAU_CALLSITE=1`)
 - PDT based Source level instrumentation: routine & loop
 - Event based sampling (`TAU_SAMPLING=1` or `tau_exec -ebs`)
 - Callstack unwinding with sampling (`TAU_EBS_UNWIND=1`)
 - OpenMP Tools Interface TR6 (OMPT, `tau_exec -T ompt,tr6`)
 - CUDA CUPTI, OpenCL (`tau_exec -T cupti -cupti`)

Application Performance Engineering using TAU

- How much time is spent in each application routine and outer *loops*? Within loops, what is the contribution of each *statement*? What is the time spent in OpenMP loops?
- How many instructions are executed in these code regions?
Floating point, Level 1 and 2 *data cache misses*, hits, branches taken? What is the extent of vectorization for loops on Intel MIC?
- What is the memory usage of the code? When and where is memory allocated/de-allocated? Are there any memory leaks? What is the memory footprint of the application? What is the memory high water mark?
- How much energy does the application use in Joules? What is the peak power usage?
- What are the I/O characteristics of the code? What is the peak read and write *bandwidth* of individual calls, total volume?
- What is the contribution of each *phase* of the program? What is the time wasted/spent waiting for collectives, and I/O operations in Initialization, Computation, I/O phases?
- How does the application *scale*? What is the efficiency, runtime breakdown of performance across different core counts?

Inclusive vs. Exclusive values

- Inclusive
 - Information of all sub-elements aggregated into single value
- Exclusive
 - Information cannot be subdivided further

Performance Data Measurement

Direct via Probes

```
Call START('potential')  
// code  
Call STOP('potential')
```

- Exact measurement
- Fine-grain control
- Calls inserted into code

Indirect via Sampling

- No code modification
- Minimal effort
- Relies on debug symbols (**-g**)

Event-Based Sampling (EBS)

- Running program is periodically interrupted to take measurement
 - Timer interrupt, OS signal, or HWC overflow
 - Service routine examines return-address stack
 - Addresses are mapped to routines using symbol table information
- Statistical inference of program behavior
 - Not very detailed information on highly volatile metrics
 - Requires long-running applications
- Works with unmodified executables (`tau_exec -ebs`)

```
int main()
{
    int i;

    for (i=0; i < 3; i++)
        foo(i);

    return 0;
}

void foo(int i)
{
    if (i > 0)
        foo(i - 1);
}
```

Instrumentation

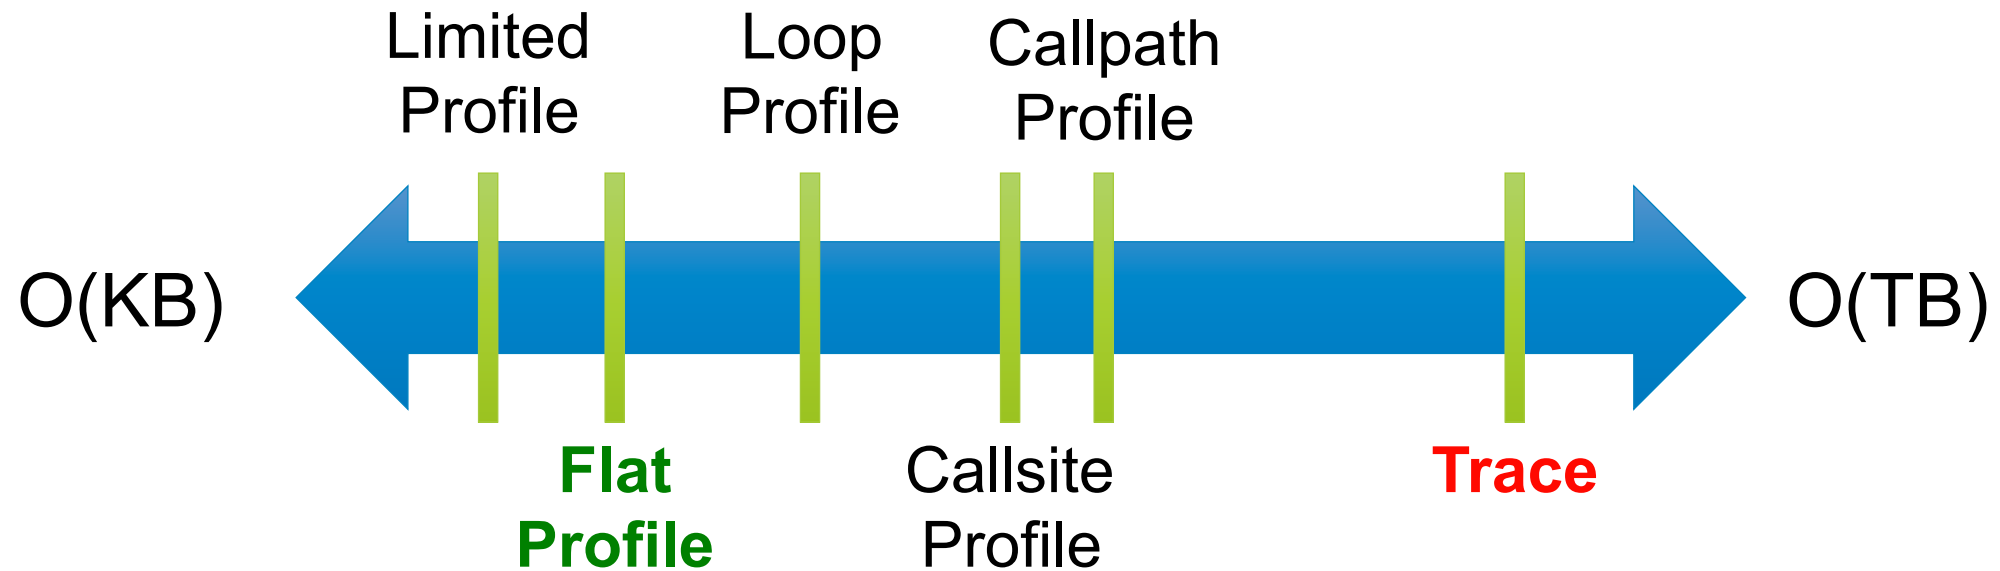

- Measurement code is inserted such that every event of interest is captured directly
 - Can be done in various ways
- Advantage:
 - Much more detailed information
- Disadvantage:
 - Processing of source-code / executable necessary
 - Large relative overheads for small functions

```
int main()
{
    int i;
    TAU_START("main")
    for (i=0; i < 3; i++)
        foo(i);
    TAU_STOP("main");
    return 0;
}

void foo(int i)
{
    TAU_START("foo");
    if (i > 0)
        foo(i - 1);
    TAU_STOP("foo");
}
```

How much data do you want?

Types of Performance Profiles

- **Flat** profiles
 - Metric (e.g., time) spent in an event
 - Exclusive/inclusive, # of calls, child calls, ...
- **Callpath** profiles
 - Time spent along a calling path (edges in callgraph)
 - `"main=> f1 => f2 => MPI_Send"`
 - Set the **TAU_CALLPATH** and **TAU_CALLPATH_DEPTH** environment variables
- **Callsite** profiles
 - Time spent along in an event at a given source location
 - Set the **TAU_CALLSITE** environment variable
- **Phase** profiles
 - Flat profiles under a phase (nested phases allowed)
 - Default "main" phase
 - Supports static or dynamic (e.g. per-iteration) phases

Using TAU's Runtime Preloading Tool: `tau_exec`

- Preload a wrapper that intercepts the runtime system call and substitutes with another
 - MPI
 - OpenMP
 - POSIX I/O
 - Memory allocation/deallocation routines
 - Wrapper library for an external package
- No modification to the binary executable!
- Enable other TAU options (communication matrix, OTF2, event-based sampling)
- Add `tau_exec` before the name of the binary
 - `srun tau_exec ./a.out`
 - `srun tau_exec -T ompt,tr6,mpi,papi -ompt ./a.out`

tau_exec

```
$ tau_exec
```

```
Usage: tau_exec [options] [--] <exe> <exe options>
```

Options:

```
-v          Verbose mode
-s          Show what will be done but don't actually do anything (dryrun)
-qsub       Use qsub mode (BG/P only, see below)
-io         Track I/O
-memory     Track memory allocation/deallocation
-memory_debug Enable memory debugger
-cuda       Track GPU events via CUDA
-cupti      Track GPU events via CUPTI (Also see env. variable TAU_CUPTI_API)
-openccl    Track GPU events via OpenCL
-openacc    Track GPU events via OpenACC (currently PGI only)
-ompt       Track OpenMP events via OMPT interface
-armci      Track ARMCI events via PARMCI
-ebs        Enable event-based sampling
-ebs_period=<count> Sampling period (default 1000)
-ebs_source=<counter> Counter (default itimer)
-um         Enable Unified Memory events via CUPTI
-T <DISABLE,GNU,ICPC,MPI,OMPT,OPENMP,PAPI,PDT,PROFILE,PTHREAD,SCOREP,SERIAL> : Specify TAU tags
-loadlib=<file.so> : Specify additional load library
-XrunTAUsh-<options> : Specify TAU library directly
-gdb        Run program in the gdb debugger
```

Notes:

```
Defaults if unspecified: -T MPI
MPI is assumed unless SERIAL is specified
```

- Tau_exec preloads the TAU wrapper libraries and performs measurements.

No need to recompile the application!

tau_exec Example (continued)

Example:

```
mpirun -np 2 tau_exec -T icpc,ompt,mpi -ompt ./a.out
```

```
mpirun -np 2 tau_exec -io ./a.out
```

Example - event-based sampling with samples taken every 1,000,000 FP instructions

```
mpirun -np 8 tau_exec -ebs -ebs_period=1000000 -ebs_source=PAPI_FP_INS ./ring
```

Examples - GPU:

```
tau_exec -T serial,cupti -cupti ./matmult (Preferred for CUDA 4.1 or later)
```

```
tau_exec -openacc ./a.out
```

```
tau_exec -T serial -opencl ./a.out (OPENCL)
```

```
mpirun -np 2 tau_exec -T mpi,cupti,papi -cupti -um ./a.out (Unified Virtual Memory in CUDA 6.0+)
```

qsub mode (IBM BG/Q only):

Original:

```
qsub -n 1 --mode smp -t 10 ./a.out
```

With TAU:

```
tau_exec -qsub -io -memory -- qsub -n 1 ... -t 10 ./a.out
```

Memory Debugging:

-memory option:

Tracks heap allocation/deallocation and memory leaks.

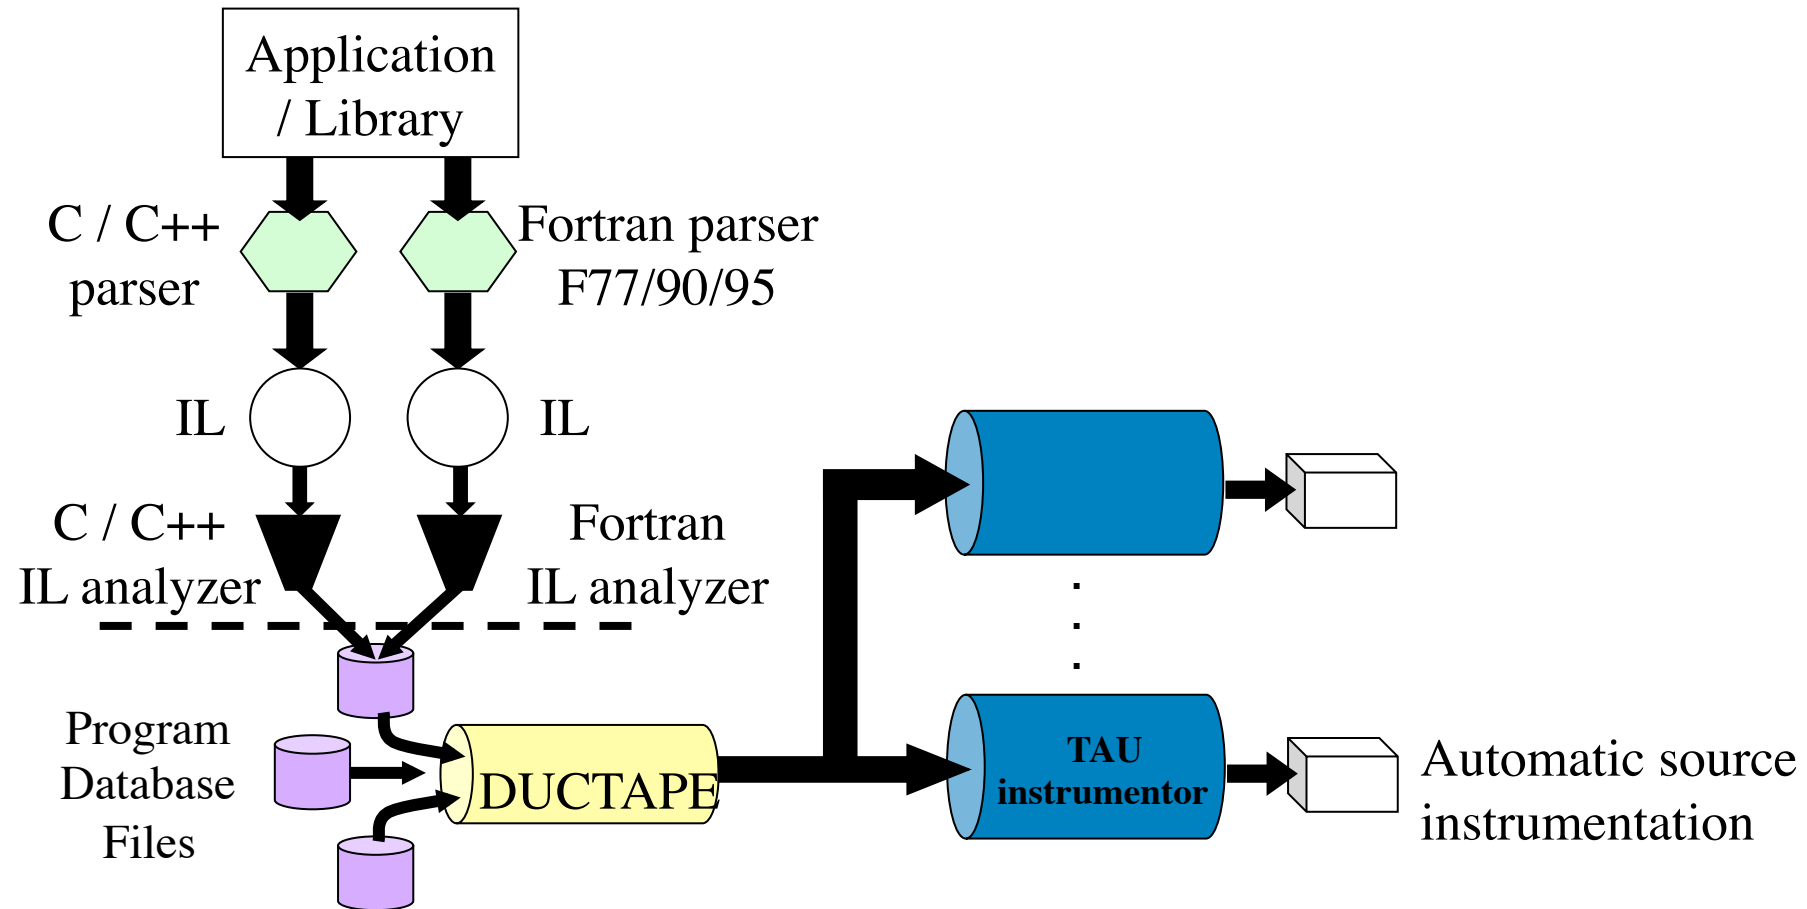

-memory_debug option:

Detects memory leaks, checks for invalid alignment, and checks for array overflow. This is exactly like setting TAU_TRACK_MEMORY_LEAKS=1 and TAU_MEMDBG_PROTECT_ABOVE=1 and running with -memory

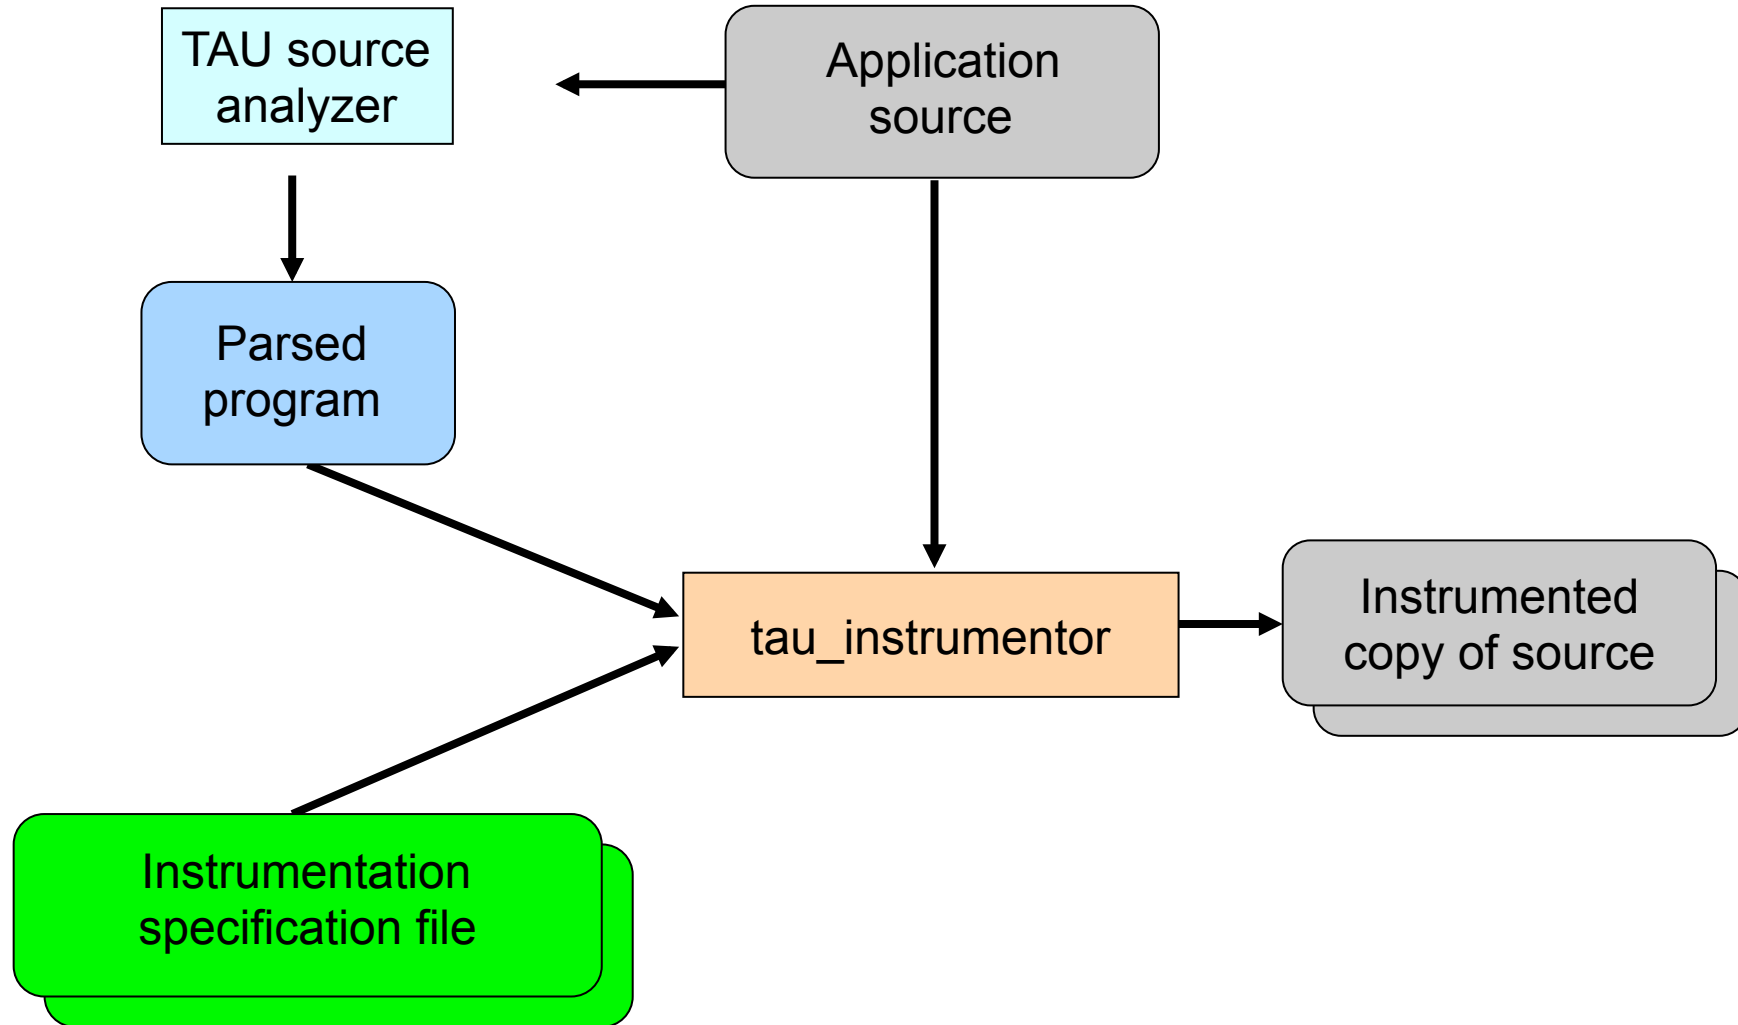

- tau_exec can enable event based sampling while launching the executable using the **-ebs** flag!

TAU's Source Instrumentation

TAU's Static Analysis System: Program Database Toolkit (PDT)

Automatic Source Instrumentation using PDT

Installing and Configuring TAU

■ Installing PDT:

- `wget http://tau.uoregon.edu/pdt.tgz`
- `./configure; make ; make install`

■ Installing TAU:

- `wget http://tau.uoregon.edu/tau.tgz`
- `./configure -ompt=download-tr6 -c++=mpicxx -cc=mpicc -fortran=mpif90 -mpi -bfd=download -pdt=<dir> -papi=<dir> ...`
- `make install; export PATH=<taudir>/x86_64/bin:$PATH`

■ Using TAU for source instrumentation:

- `export TAU_MAKEFILE=<taudir>/x86_64/lib/Makefile.tau-<TAGS>`
- `make CC=tau_cc.sh CXX=tau_cxx.sh F90=tau_f90.sh`

Using TAU's Source Code Instrumentation

- TAU supports several compilers, measurement, and thread options

Intel compilers, profiling with hardware counters using PAPI, MPI library, CUDA...

Each measurement configuration of TAU corresponds to a unique stub makefile (configuration file) and library that is generated when you configure it

- To instrument source code automatically using PDT

Choose an appropriate TAU stub makefile in <arch>/lib:

```
% source /home/nct00/nct00005/tau.bashrc;
```

```
% export TAU_MAKEFILE=$TAU/Makefile.tau-icpc-papi-ompt-tr6-mpi-pdt-openmp
```

```
% export TAU_OPTIONS='-optVerbose ...' (see tau_compiler.sh )
```

Use tau_f90.sh, tau_cxx.sh, tau_upc.sh, or tau_cc.sh as F90, C++, UPC, or C compilers respectively:

```
% mpif90 foo.f90      changes to
```

```
% tau_f90.sh foo.f90
```

- Set runtime environment variables, execute application and analyze performance data:

```
% pprof (for text based profile display)
```

```
% paraprof (for GUI)
```

Different Makefiles for TAU Compiler and Runtime Options

```
% source /home/nct00/nct00005/tau.bashrc
% ls $TAU/Makefile.*
/home/nct00/nct00005/pkgs/tau-2.28/x86_64/lib/Makefile.tau
/home/nct00/nct00005/pkgs/tau-2.28/x86_64/lib/Makefile.tau-icpc-mpi-pdt
/home/nct00/nct00005/pkgs/tau-2.28/x86_64/lib/Makefile.tau-icpc-papi-mpi-pdt
/home/nct00/nct00005/pkgs/tau-2.28/x86_64/lib/Makefile.tau-icpc-papi-mpi-pdt-openmp-opari
/home/nct00/nct00005/pkgs/tau-2.28/x86_64/lib/Makefile.tau-icpc-papi-mpi-pthread-pdt
/home/nct00/nct00005/pkgs/tau-2.28/x86_64/lib/Makefile.tau-icpc-papi-ompt-tr6-mpi-pdt-openmp
```

For an MPI+OpenMP+F90 application with Intel MPI, you may choose

Makefile.tau-icpc-papi-ompt-tr6-mpi-pdt-openmp

- Supports MPI instrumentation & PDT for automatic source instrumentation

```
% export TAU_MAKEFILE=$TAU/Makefile.tau-icpc-papi-ompt-tr6-mpi-pdt-openmp
```

```
% tau f90.sh matmult.f90 -o matmult
% mpirun -np 8 ./matmult
% paraprof
```

Configuration tags for tau_exec

```
% ./configure -pdt=<dir> -mpi -papi=<dir>; make install
```

Creates in \$TAU:

Makefile.tau-papi-mpi-pdt (Configuration parameters in stub makefile)

shared-papi-mpi-pdt/libTAU.so

```
% ./configure -pdt=<dir> -mpi; make install creates
```

Makefile.tau-mpi-pdt

shared-mpi-pdt/libTAU.so

To explicitly choose preloading of shared-<options>/libTAU.so change:

```
% mpirun -np 256 ./a.out to
```

```
% mpirun -np 256 tau_exec -T <comma_separated_options> ./a.out
```

```
% mpirun -np 256 tau_exec -T papi,mpi,pdt ./a.out
```

Preloads \$TAU/shared-papi-mpi-pdt/libTAU.so

```
% mpirun -np 256 tau_exec -T papi ./a.out
```

Preloads \$TAU/shared-papi-mpi-pdt/libTAU.so by matching.

```
% mpirun -np 256 tau_exec -T papi,mpi,pdt -s ./a.out
```

Does not execute the program. Just displays the library that it will preload if executed without the **-s** option.

NOTE: -mpi configuration is selected by default. Use -T serial for

Sequential programs.

Simplifying TAU's usage (tau_exec)

- Uninstrumented execution
 - % mpirun -np 16 ./a.out
- Track MPI performance
 - % mpirun -np 16 **tau_exec** ./a.out
- Track POSIX I/O, OpenMP, and MPI performance (MPI enabled by default)
 - % mpirun -np 16 **tau_exec** -T mpi,pdt,ompt -io ./a.out
- Track memory operations
 - % export TAU_TRACK_MEMORY_LEAKS=1
 - % mpirun -np 16 **tau_exec** -memory_debug ./a.out (bounds check)
- Use event based sampling (compile with -g)
 - % mpirun -np 16 **tau_exec** -ebs ./a.out
 - Also -ebs_source=<PAPI_COUNTER> -ebs_period=<overflow_count>
- Load wrapper interposition library
 - % mpirun -np 16 **tau_exec** -loadlib=<path/libwrapper.so> ./a.out
- **Track GPGPU operations**
 - % mpirun -np 16 **tau_exec** -cupti ./a.out
 - % mpirun -np 16 **tau_exec** -openacc ./a.out

Binary Rewriting Instrumentation

- Support for both static and dynamic executables
- Specify a list of routines to instrument
- Specify the TAU measurement library to be injected
- MAQAO [UVSQ, Intel Exascale Labs]:

```
% tau_rewrite -T [tags] a.out -o a.inst
```
- DyninstAPI [U. Maryland and U. Wisconsin, Madison]:

```
% tau_run -T [tags] a.out -o a.inst
```
- Pebil [UC San Diego]:

```
% tau_pebil_rewrite -T [tags] a.out -o a.inst
```
- Execute the application to get measurement data:

```
% mpirun -np 256 ./a.inst
```

Compile-Time Options for TAU's compiler scripts (e.g., tau_f90.sh)

Optional parameters for the TAU_OPTIONS environment variable:

% tau_compiler.sh

-optVerbose	Turn on verbose debugging messages
-optComplnst	Use compiler based instrumentation
-optNoComplnst	Do not revert to compiler instrumentation if source instrumentation fails.
-optTrackIO	Wrap POSIX I/O call and calculates vol/bw of I/O operations (configure TAU with <i>-iowrapper</i>)
-optTrackGOMP	Enable tracking GNU OpenMP runtime layer (used without <i>-opari</i>)
-optMemDbg	Enable runtime bounds checking (see TAU_MEMDBG_* env vars)
-optKeepFiles	Does not remove intermediate .pdb and .inst.* files
-optPreProcess	Preprocess sources (OpenMP, Fortran) before instrumentation
-optTauSelectFile=" <i><file></i> "	Specify selective instrumentation file for <i>tau_instrumentor</i>
-optTauWrapFile=" <i><file></i> "	Specify path to <i>link_options.tau</i> generated by <i>tau_gen_wrapper</i>
-optHeaderInst	Enable Instrumentation of headers
-optTrackUPCR	Track UPC runtime layer routines (used with tau_upc.sh)
-optLinking=""	Options passed to the linker. Typically <i>\$(TAU_MPI_FLIBS) \$(TAU_LIBS) \$(TAU_CXXLIBS)</i>
-optCompile=""	Options passed to the compiler. Typically <i>\$(TAU_MPI_INCLUDE) \$(TAU_INCLUDE) \$(TAU_DEFS)</i>
-optPdtF95Opts=""	Add options for Fortran parser in PDT (f95parse/gfparse) ...

Compile-Time Options (contd.)

▪ Optional parameters for the TAU_OPTIONS environment variable:

% tau_compiler.sh

-optMICOffload	Links code for Intel MIC offloading, requires both host and MIC TAU libraries
-optShared	Use TAU's shared library (libTAU.so) instead of static library (default)
-optPdtCxxOpts=""	Options for C++ parser in PDT (cxxparse).
-optPdtF90Parser=""	Specify a different Fortran parser
-optPdtCleanscapeParser	Specify the Cleanscape Fortran parser instead of GNU gfparsers
-optTau=""	Specify options to the tau_instrumentor
-optTrackDMAPP	Enable instrumentation of low-level DMAPP API calls on Cray
-optTrackPthread	Enable instrumentation of pthread calls

See tau_compiler.sh for a full list of TAU_OPTIONS.

...

Compiling Fortran Codes with TAU

- If your Fortran code uses free format in .f files (fixed is default for .f), you may use:
`% export TAU_OPTIONS= '-optPdtF95Opts="-R free" -optVerbose '`
- To use the compiler based instrumentation instead of PDT (source-based):
`% export TAU_OPTIONS= '-optComplnst -optVerbose'`
- If your Fortran code uses C preprocessor directives (`#include`, `#ifdef`, `#endif`):
`% export TAU_OPTIONS= '-optPreProcess -optVerbose -optDetectMemoryLeaks'`
- To use an instrumentation specification file:
`% export TAU_OPTIONS= '-optTauSelectFile=select.tau -optVerbose -optPreProcess'`
`% cat select.tau`
`BEGIN_INSTRUMENT_SECTION`
`loops routine="#"`
`# this statement instruments all outer loops in all routines. # is wildcard as well as comment in first column.`
`END_INSTRUMENT_SECTION`

TAU's Selective Instrumentation (Filter) File Format

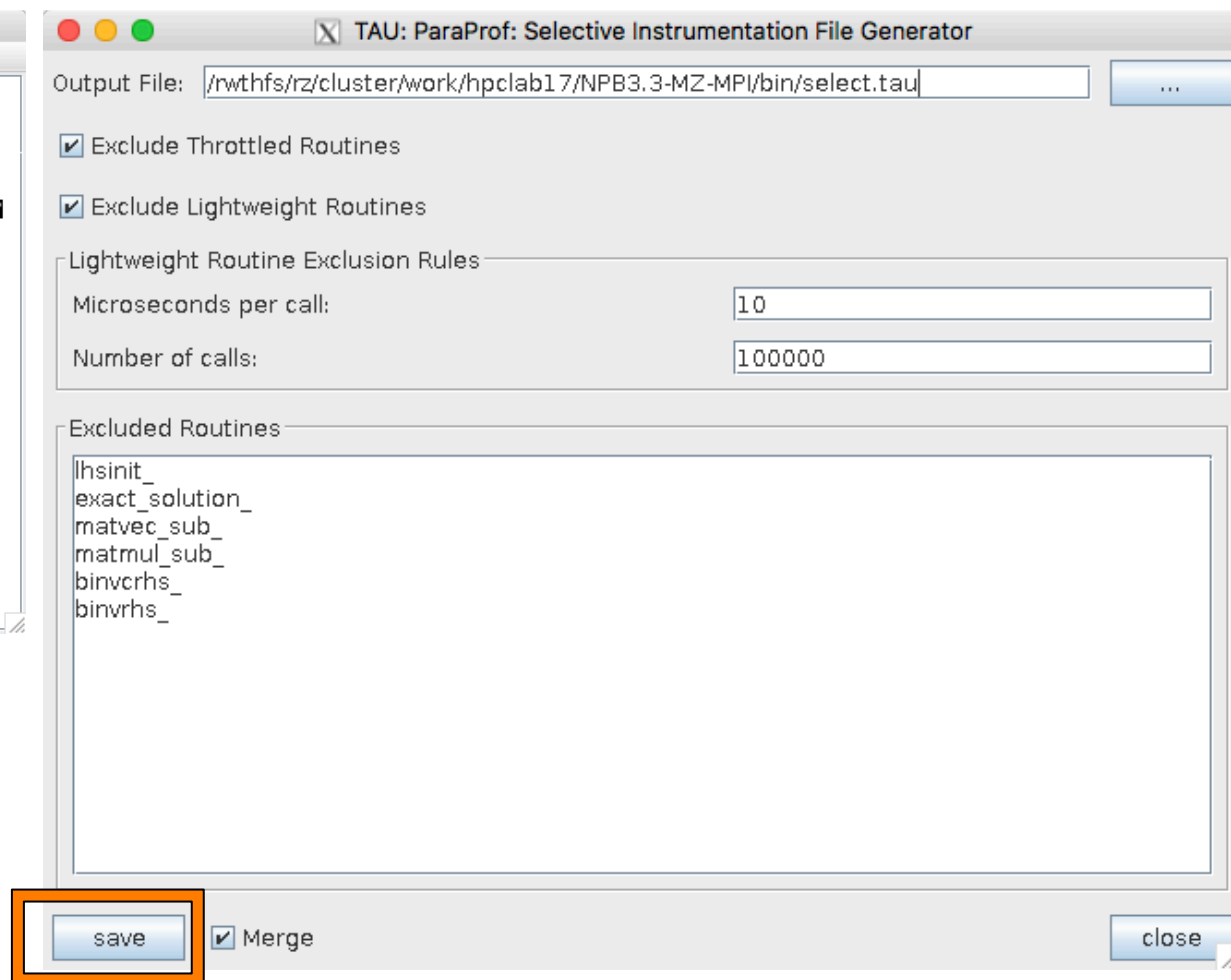

```
% export TAU_OPTIONS='-optTauSelectFile=/path/to/select.tau ...'
% cat select.tau
BEGIN_INCLUDE_LIST
int main#
int dgemm#
END_INCLUDE_LIST
BEGIN_FILE_INCLUDE_LIST
Main.c
Blas/*.f77
END_FILE_INCLUDE_LIST
# replace INCLUDE with EXCLUDE list for excluding routines/files

BEGIN_INSTRUMENT_SECTION
loops routine="foo"
loops routine="int main#"
END_INSTRUMENT_SECTION
% export TAU_SELECT_FILE=select.tau      (to use at runtime)
```

Create a Selective Instrumentation File, Re-instrument, Re-run

% paraprof

TAU's Runtime Environment Variables

Environment Variable	Default	Description
TAU_TRACE	0	Setting to 1 turns on tracing
TAU_CALLPATH	0	Setting to 1 turns on callpath profiling
TAU_TRACK_MEMORY_FOOTPRINT	0	Setting to 1 turns on tracking memory usage by sampling periodically the resident set size and high water mark of memory usage
TAU_TRACK_POWER	0	Tracks power usage by sampling periodically.
TAU_CALLPATH_DEPTH	2	Specifies depth of callpath. Setting to 0 generates no callpath or routine information, setting to 1 generates flat profile and context events have just parent information (e.g., Heap Entry: foo)
TAU_SAMPLING	1	Setting to 1 enables event-based sampling.
TAU_TRACK_SIGNALS	0	Setting to 1 generate debugging callstack info when a program crashes
TAU_COMM_MATRIX	0	Setting to 1 generates communication matrix display using context events
TAU_THROTTLE	1	Setting to 0 turns off throttling. Throttles instrumentation in lightweight routines that are called frequently
TAU_THROTTLE_NUMCALLS	100000	Specifies the number of calls before testing for throttling
TAU_THROTTLE_PERCALL	10	Specifies value in microseconds. Throttle a routine if it is called over 100000 times and takes less than 10 usec of inclusive time per call
TAU_CALLSITE	0	Setting to 1 enables callsite profiling that shows where an instrumented function was called. Also compatible with tracing.
TAU_PROFILE_FORMAT	Profile	Setting to “merged” generates a single file. “snapshot” generates xml format
TAU_METRICS	TIME	Setting to a comma separated list generates other metrics. (e.g., ENERGY,TIME,P_VIRTUAL_TIME,PAPI_FP_INS,PAPI_NATIVE_<event>:<subevent>)

Runtime Environment Variables

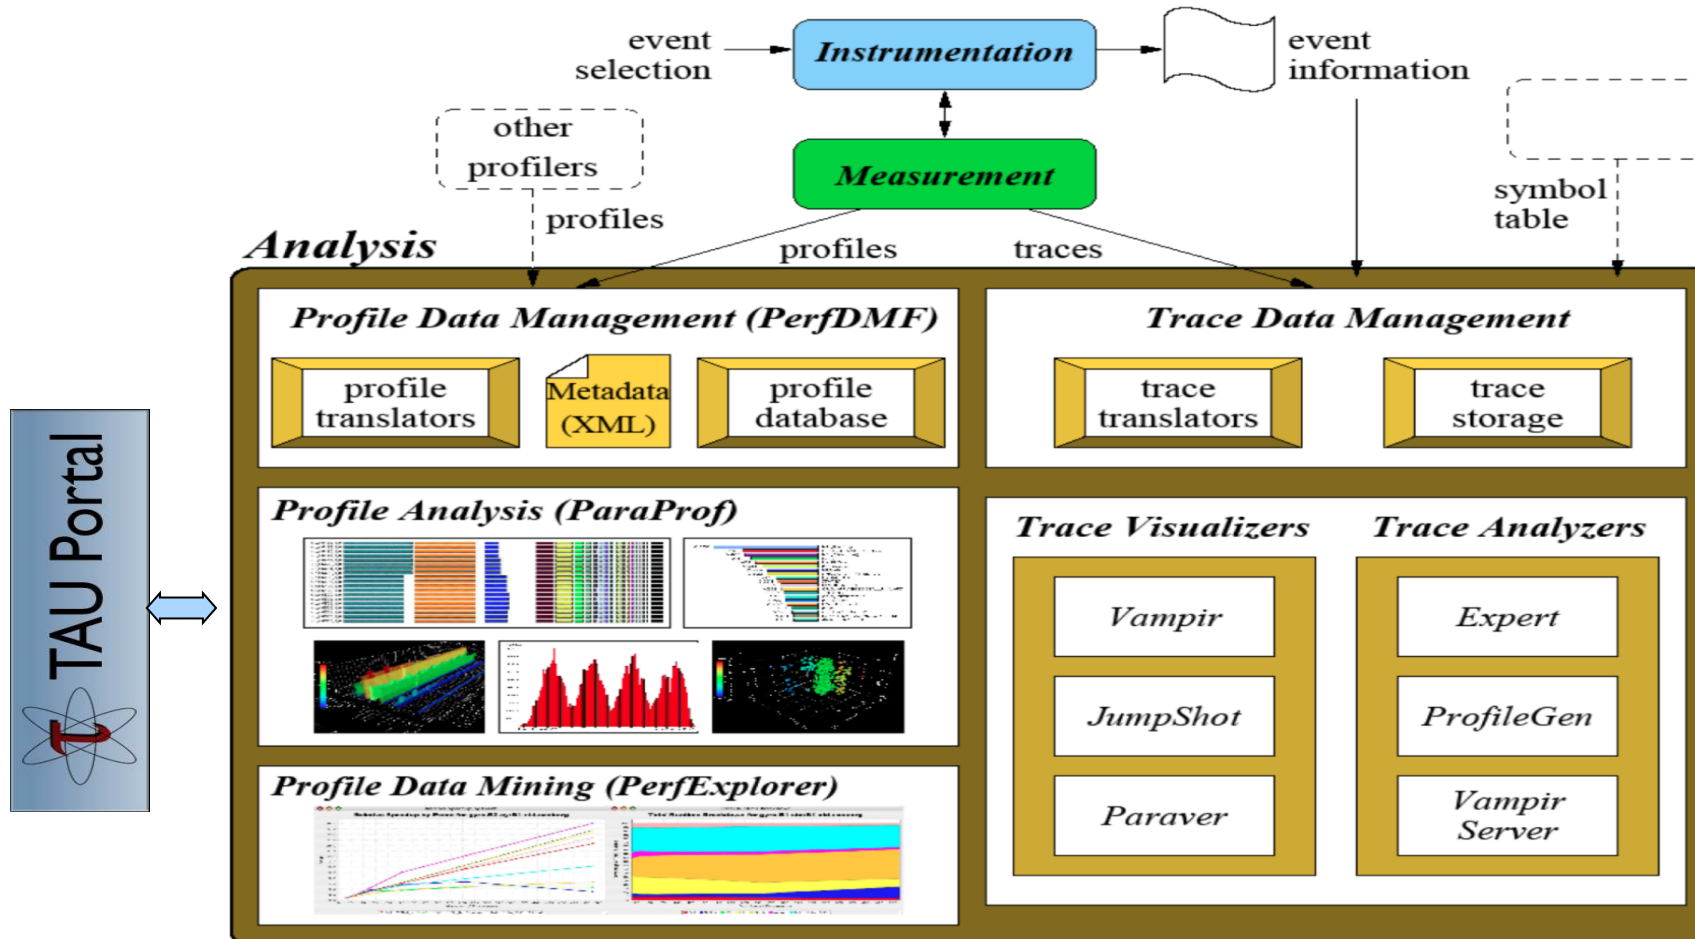

Environment Variable	Default	Description
TAU_TRACE	0	Setting to 1 turns on tracing
TAU_TRACE_FORMAT	Default	Setting to “otf2” turns on TAU’s native OTF2 trace generation (configure with –otf=download)
TAU_EBS_UNWIND	0	Setting to 1 turns on unwinding the callstack during sampling (use with tau_exec –ebs or TAU_SAMPLING=1)
TAU_EBS_RESOLUTION	line	Setting to “function” or “file” changes the sampling resolution to function or file level respectively.
TAU_TRACK_LOAD	0	Setting to 1 tracks system load on the node
TAU_SELECT_FILE	Default	Setting to a file name, enables selective instrumentation based on exclude/include lists specified in the file.
TAU_OMPT_SUPPORT_LEVEL	basic	Setting to “full” improves resolution of OMPT TR6 regions on threads 1.. N-1. Also, “lowoverhead” option is available.
TAU_OMPT_RESOLVE_ADDRESS_EAGERLY	0	Setting to 1 is necessary for event based sampling to resolve addresses with OMPT TR6 (-ompt=download-tr6)

Runtime Environment Variables

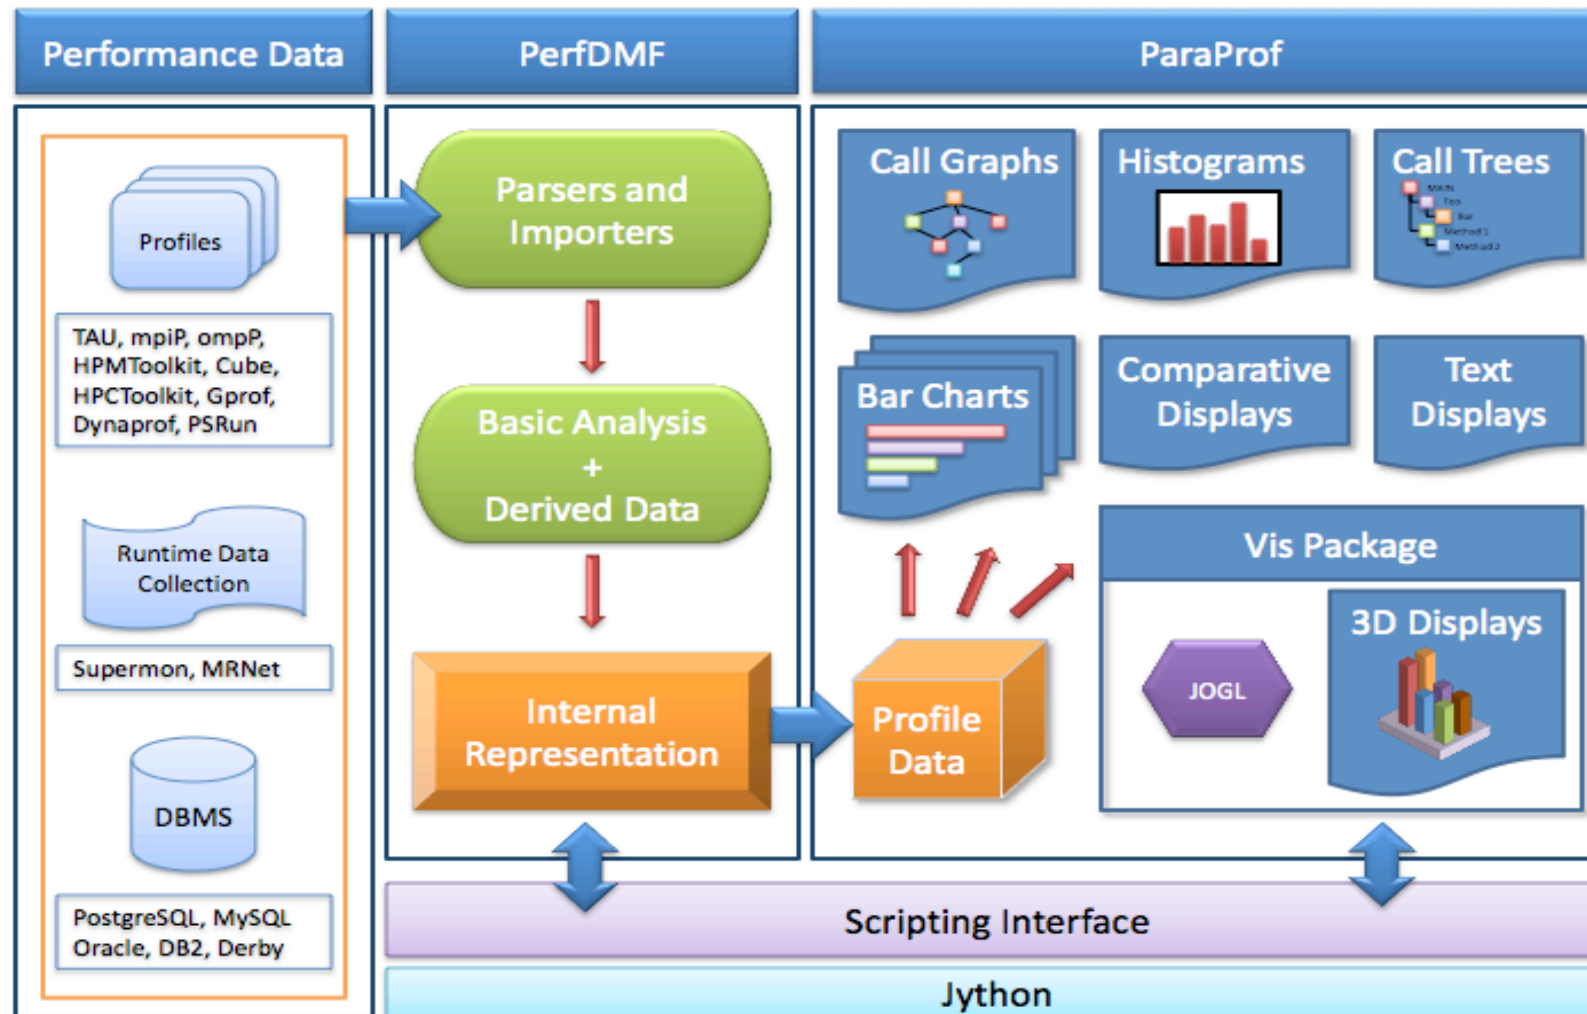

Environment Variable	Default	Description
TAU_TRACK_MEMORY_LEAKS	0	Tracks allocates that were not de-allocated (needs <code>–optMemDbg</code> or <code>tau_exec –memory</code>)
TAU_EBS_SOURCE	TIME	Allows using PAPI hardware counters for periodic interrupts for EBS (e.g., <code>TAU_EBS_SOURCE=PAPI_TOT_INS</code> when <code>TAU_SAMPLING=1</code>)
TAU_EBS_PERIOD	100000	Specifies the overflow count for interrupts
TAU_MEMDBG_ALLOC_MIN/MAX	0	Byte size minimum and maximum subject to bounds checking (used with <code>TAU_MEMDBG_PROTECT_*</code>)
TAU_MEMDBG_OVERHEAD	0	Specifies the number of bytes for TAU's memory overhead for memory debugging.
TAU_MEMDBG_PROTECT_BELOW/ABOVE	0	Setting to 1 enables tracking runtime bounds checking below or above the array bounds (requires <code>–optMemDbg</code> while building or <code>tau_exec –memory</code>)
TAU_MEMDBG_ZERO_MALLOC	0	Setting to 1 enables tracking zero byte allocations as invalid memory allocations.
TAU_MEMDBG_PROTECT_FREE	0	Setting to 1 detects invalid accesses to deallocated memory that should not be referenced until it is reallocated (requires <code>–optMemDbg</code> or <code>tau_exec –memory</code>)
TAU_MEMDBG_ATTEMPT_CONTINUE	0	Setting to 1 allows TAU to record and continue execution when a memory error occurs at runtime.
TAU_MEMDBG_FILL_GAP	Undefined	Initial value for gap bytes
TAU_MEMDBG_ALINGMENT	Sizeof(int)	Byte alignment for memory allocations
TAU_EVENT_THRESHOLD	0.5	Define a threshold value (e.g., .25 is 25%) to trigger marker events for min/max

TAU's Analysis Tools: PerfExplorer

TAU Analysis

TAUdb: Performance Data Management Framework

Using TAUdb

- **Configure TAUdb (Done by each user)**

- % `taudb_configure --create-default`

- Choose derby, PostgreSQL, MySQL, Oracle or DB2
 - Hostname
 - Username
 - Password
 - Say yes to downloading required drivers (we are not allowed to distribute these)
 - Stores parameters in your `~/.ParaProf/taudb.cfg` file

- **Configure PerfExplorer (Done by each user)**

- % `perfexplorer_configure`

- **Execute PerfExplorer**

- % `perfexplorer`

Local Installation (*mn4*, *BSC*)

- Setup preferred program environment compilers

```
% module load intel/2017.4 impi/2017.4
% source /home/nct00/nct00005/tau.bashrc
% cp /home/nct00/nct00005/pkgs/tar/data.tgz . ; tar zxf data.tgz
% cd data
% cat README
  and follow the steps
% cd tau
% ./upload.sh
% getnode
% perfexplorer
```

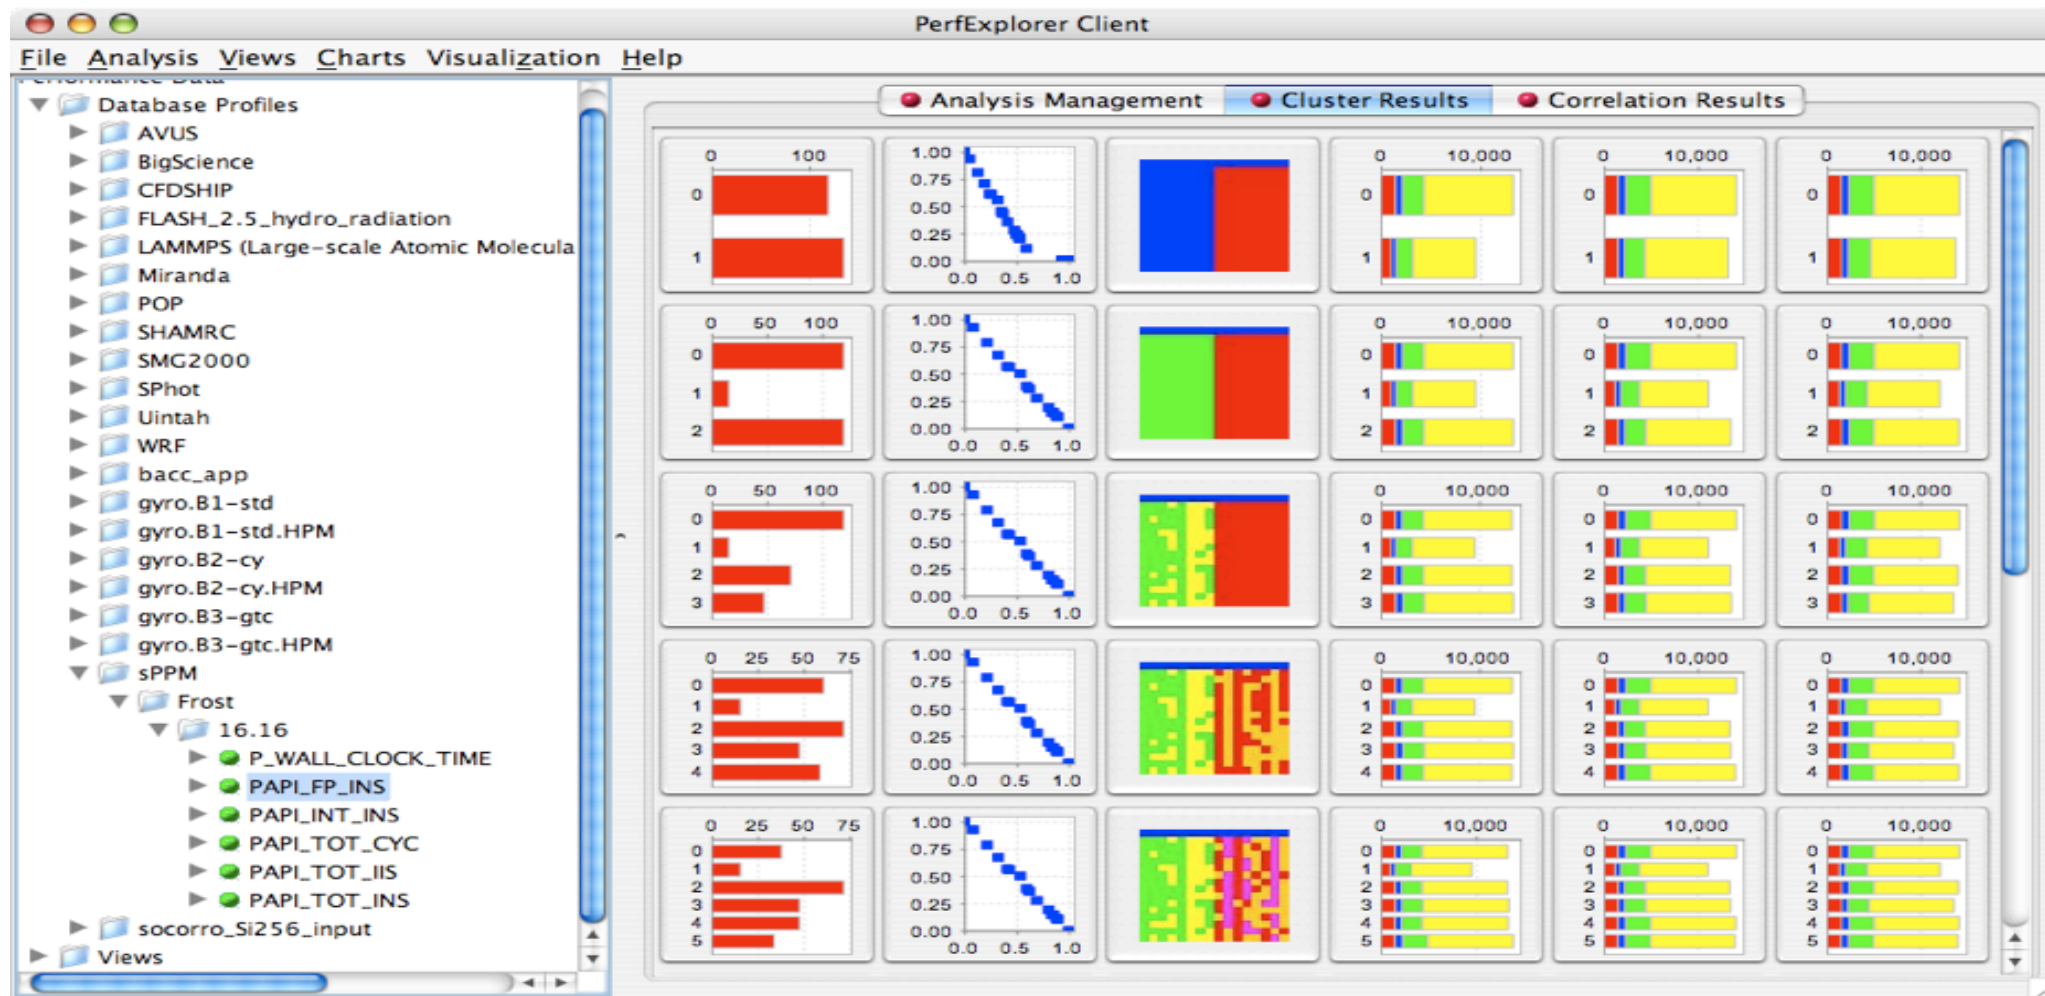

Performance Data Mining (PerfExplorer)

- Performance knowledge discovery framework
 - Data mining analysis applied to parallel performance data
 - comparative, clustering, correlation, dimension reduction, ...
 - Use the existing TAU infrastructure
 - TAU performance profiles, taudb
 - Client-server based system architecture
- Technology integration
 - Java API and toolkit for portability
 - taudb
 - R-project/Omegahat, Octave/Matlab statistical analysis
 - WEKA data mining package
 - JFreeChart for visualization, vector output (EPS, SVG)

PerfExplorer: Using Cluster Analysis

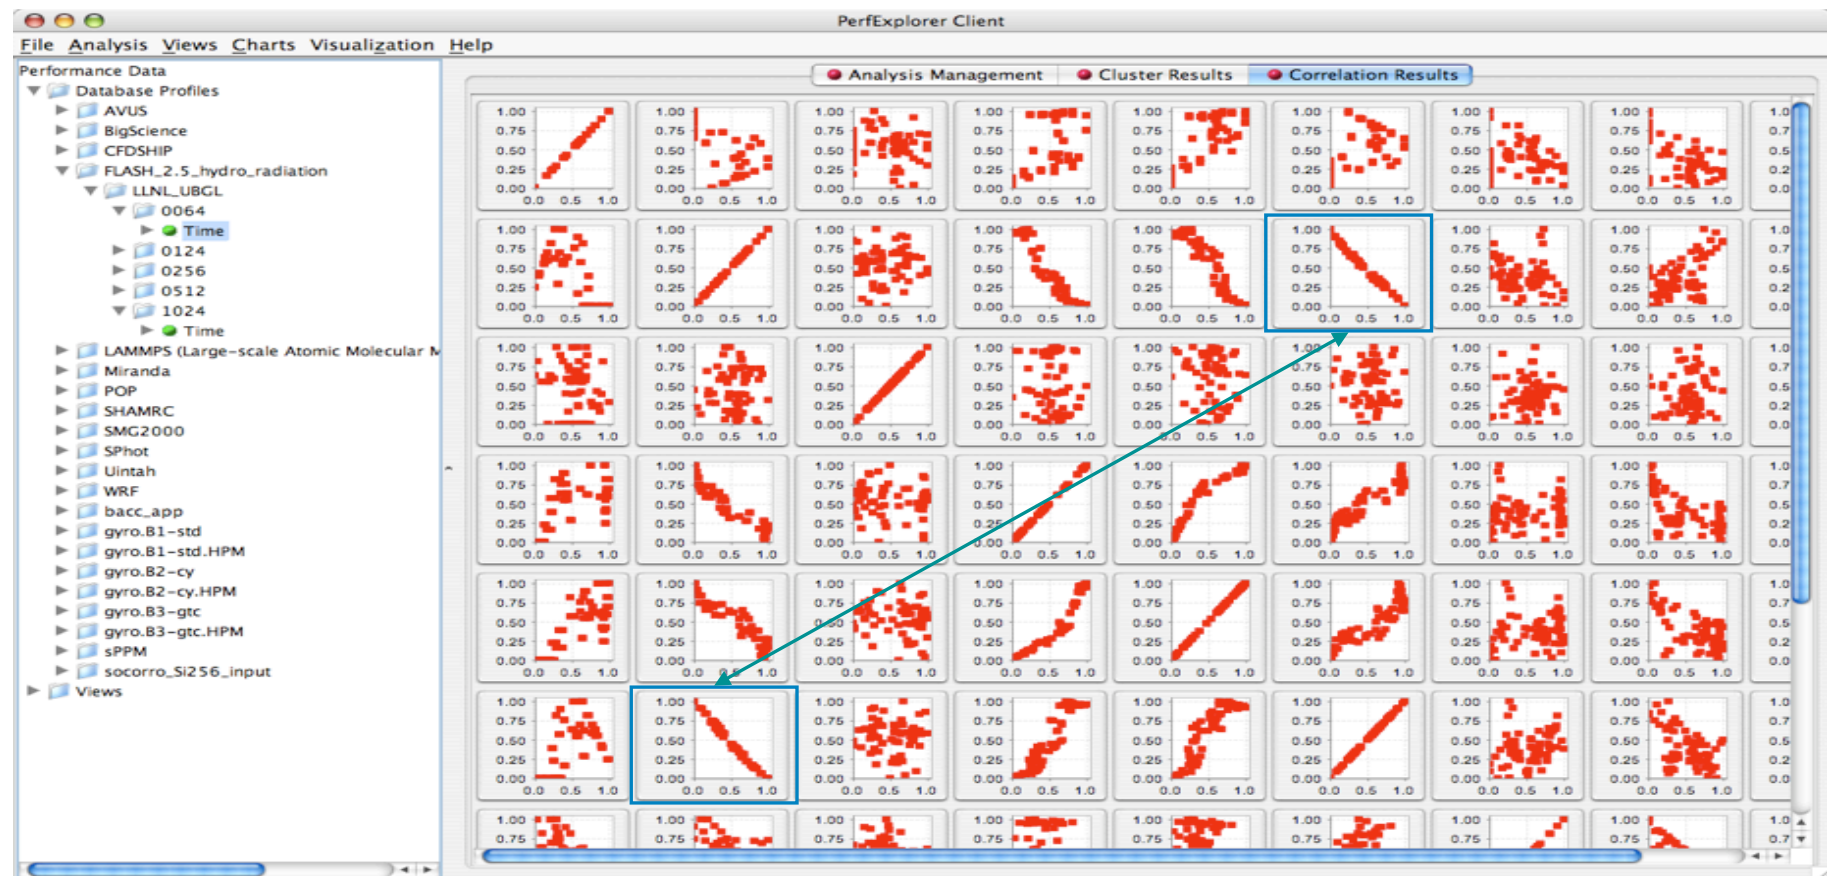

- Performance data represented as vectors - each dimension is the cumulative time for an event
- *k*-means: *k* random centers are selected and instances are grouped with the "closest" (Euclidean) center
- New centers are calculated and the process repeated until stabilization or max iterations
- Dimension reduction necessary for meaningful results
- Virtual topology, summaries constructed

PerfExplorer - Cluster Analysis (sPPM)

PerfExplorer - Correlation Analysis (Flash)

- Describes strength and direction of a linear relationship between two variables (events) in the data

PerfExplorer - Correlation Analysis (Flash)

- -0.995 indicates strong, negative relationship
- As CALC_CUT_BLOCK_CONTRIBUTIONS() increases in execution time, MPI_Barrier() decreases

PerfExplorer - Comparative Analysis

- Relative speedup, efficiency
 - total runtime, by event, one event, by phase
- Breakdown of total runtime
- Group fraction of total runtime
- Correlating events to total runtime
- Timesteps per second

PerfExplorer - Interface

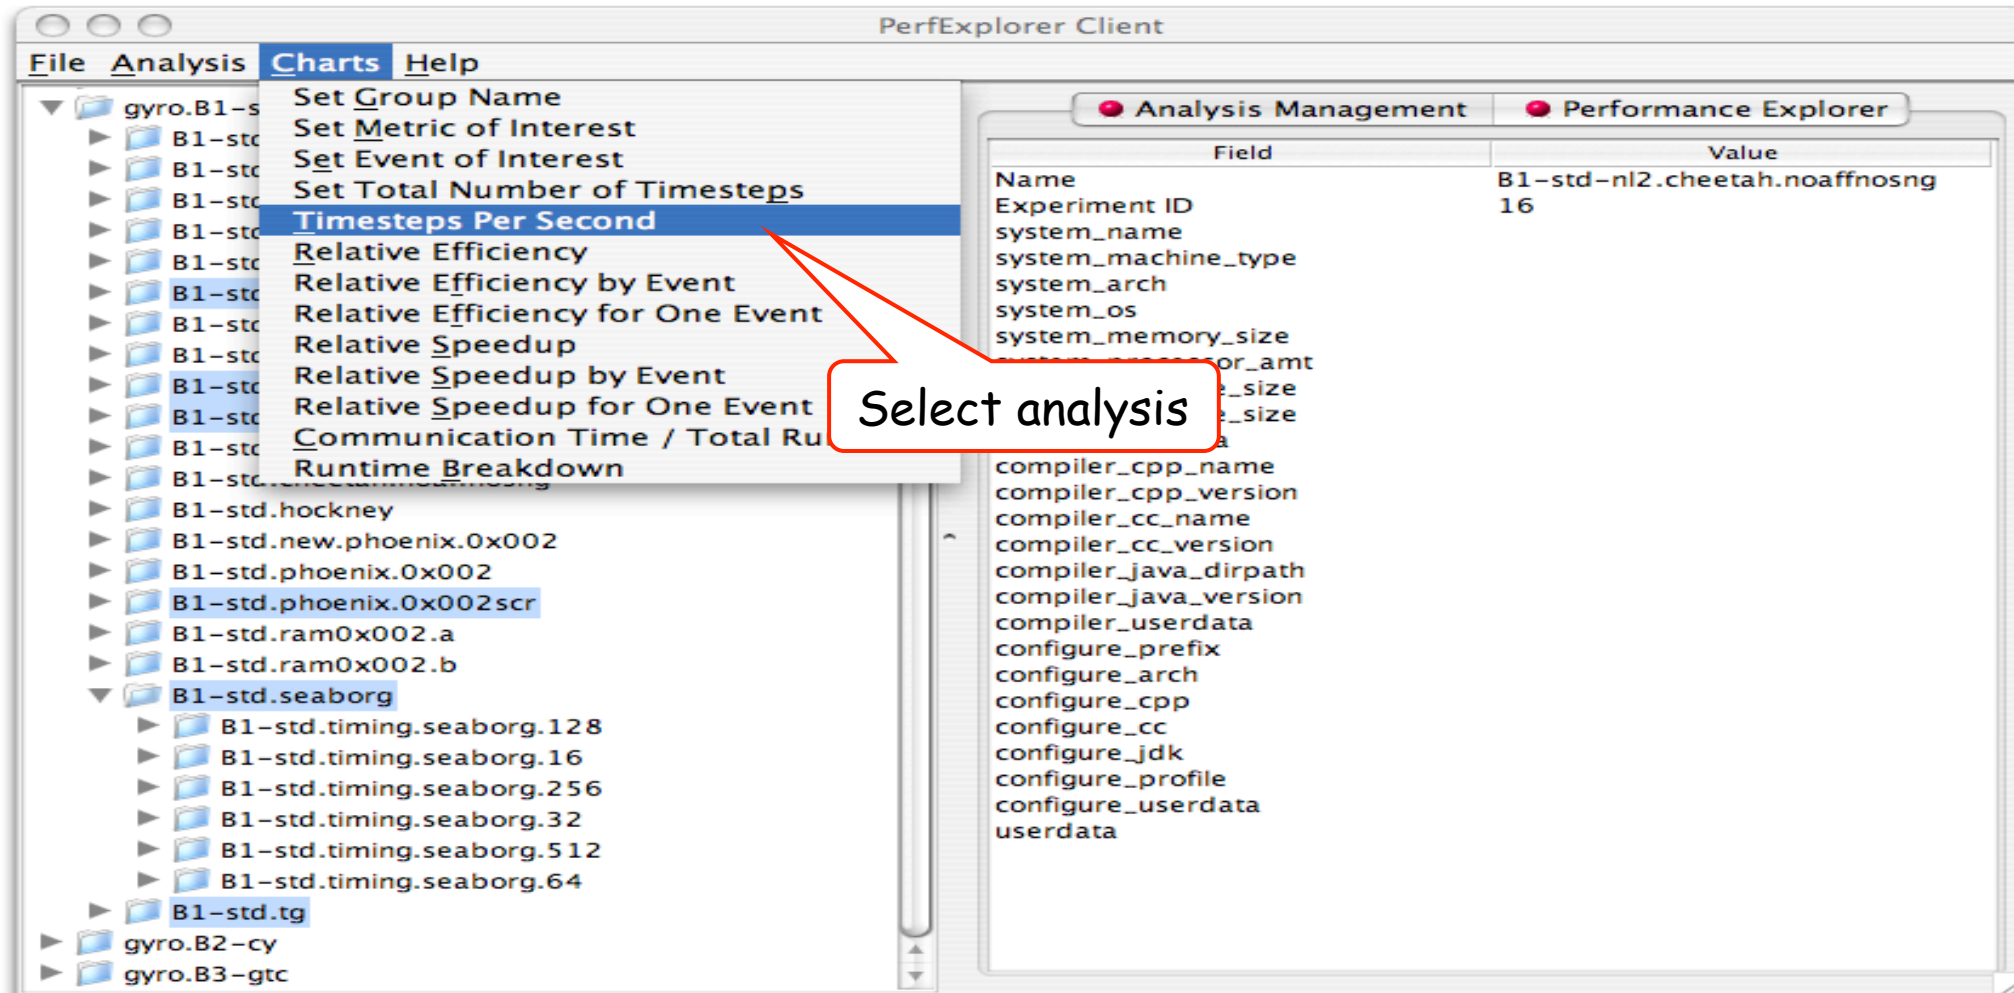

The screenshot shows the PerfExplorer Client interface. On the left is a file tree under 'gyro.B1-std'. The right pane is titled 'Analysis Management' and 'Performance Explorer'. It contains a table with the following data:

Field	Value
Name	B1-std-nl2.cheetah.noaffnosng
Experiment ID	16
system_name	
system_machine_type	
system_arch	
system_os	
system_memory_size	
system_processor_amt	
system_l1_cache_size	
system_l2_cache_size	
userdata	
cpp_name	
cpp_version	
cc_name	
cc_version	
compiler_java_dirpath	
compiler_java_version	
compiler_userdata	
configure_prefix	
configure_arch	

Three red callout boxes provide additional context:

- Select experiments and trials of interest**: Points to the file tree on the left.
- Experiment metadata**: Points to the table on the right.
- Data organized in application, experiment, trial structure (will allow arbitrary in future)**: Points to the file tree structure.

PerfExplorer - Interface

PerfExplorer - Relative Efficiency Plots

PerfExplorer - Relative Efficiency by Routine

PerfExplorer - Relative Speedup

PerfExplorer - Timesteps Per Second

Evaluate Scalability

- Goal: How does my application scale? What bottlenecks occur at what core counts?
- Load profiles in taudb database and examine with PerfExplorer

Evaluate Scalability

PerfExplorer

PerfExplorer
