Hands-on: *Goethe-HLR*
NPB-MZ-MPI / bt-mz_C.16

VI-HPS Team

Tutorial exercise objectives

- Familiarise with usage of VI-HPS tools
  - complementary tools' capabilities & interoperability
- Prepare to apply tools productively to *your* applications(s)
- Exercise is based on a small portable benchmark code
  - unlikely to have significant optimisation opportunities

- Optional (recommended) exercise extensions
  - analyse performance of alternative configurations
  - investigate effectiveness of system-specific compiler/MPI optimisations and/or placement/binding/affinity capabilities
  - investigate scalability and analyse scalability limiters
  - compare performance on different HPC platforms
  - …

Compiler and MPI modules (Goethe-HLR)

- Select modules for the Intel + IntelMPI tool chain

```
% module load comp/gcc/8.2.0 comp/intel/2019.5 mpi/intel/2019.5
```

- Copy tutorial sources to your HOME directory

```
% cd $HOME
% tar zxvf /home/vihps/public/NPB3.3-MZ-MPI.tar.gz
% cd NPB3.3-MZ-MPI
```

Use **/scratch/vihps/<userid>**
For larger job executions

- Directory for data exchange during the workshop

```
% /home/vihps/public/
```

NPB-MZ-MPI Suite

- The NAS Parallel Benchmark suite (MPI+OpenMP version)
  - Available from:

    http://www.nas.nasa.gov/Software/NPB
  - 3 benchmarks in Fortran77
  - Configurable for various sizes & classes
- Move into the NPB3.3-MZ-MPI root directory

```
% ls
bin/    common/  jobscript/  Makefile  README.install   SP-MZ/
BT-MZ/  config/  LU-MZ/      README    README.tutorial  sys/
```

- Subdirectories contain source code for each benchmark
  - plus additional configuration and common code
- The provided distribution has already been configured for the tutorial, such that it is ready to "make" one or more of the benchmarks
  - but config/make.def may first need to be adjusted to specify appropriate compiler flags

NPB-MZ-MPI / BT: config/make.def

```
#                SITE- AND/OR PLATFORM-SPECIFIC DEFINITIONS.
#
#-----------------------------------------------------------------------

#-----------------------------------------------------------------------
# Configured for generic MPI with GCC compiler
#-----------------------------------------------------------------------
#OPENMP = -fopenmp          # GCC compiler
OPENMP = -qopenmp          # Intel compiler

...
#-----------------------------------------------------------------------
# The Fortran compiler used for MPI programs
#-----------------------------------------------------------------------
MPIF77 = mpiifort

# Alternative variants to perform instrumentation
...

#MPIF77 = scorep --user  mpiifort
...
```

Uncomment COMPILER flags according to current environment

Default (no instrumentation)

Hint: uncomment a compiler wrapper to do instrumentation

Building an NPB-MZ-MPI Benchmark

```
% make
  ========================================
  =      NAS PARALLEL BENCHMARKS 3.3     =
  =      MPI+OpenMP Multi-Zone Versions  =
  =      F77                             =
  ========================================

  To make a NAS multi-zone benchmark type

        make <benchmark-name> CLASS=<class> NPROCS=<nprocs>

  where <benchmark-name> is "bt-mz", "lu-mz", or "sp-mz"
        <class>          is "S", "W", "A" through "F"
        <nprocs>         is number of processes

  [...]

 ***********************************************************
 * Custom build configuration is specified in config/make.def  *
 * Suggested tutorial exercise configuration for Archer:       *
 *       make bt-mz CLASS=C NPROCS=16                           *
 ***********************************************************
```

- Type "make" for instructions

Building an NPB-MZ-MPI Benchmark

```
% make bt-mz CLASS=C NPROCS=16
make[1]: Entering directory `BT-MZ'
make[2]: Entering directory `sys'
cc  -o setparams setparams.c -lm
make[2]: Leaving directory `sys'
../sys/setparams bt-mz 16 C
make[2]: Entering directory `../BT-MZ'
mpiifort -g -c  -O3 -qopenmp        bt.f
[…]
mpiifort -g -c  -O3 -qopenmp        mpi_setup.f
cd ../common; mpiifort -g -c  -O3 -qopenmp  print_results.f
cd ../common; mpiifort -g -c  -O3 -qopenmp  timers.f
mpiifort -g -O3 -qopenmp   -o ../bin/bt-mz_C.16 bt.o
 initialize.o exact_solution.o exact_rhs.o set_constants.o adi.o
 rhs.o zone_setup.o x_solve.o y_solve.o  exch_qbc.o solve_subs.o
 z_solve.o add.o error.o verify.o mpi_setup.o ../common/print_results.o
 ../common/timers.o
make[2]: Leaving directory `BT-MZ'
Built executable ../bin/bt-mz_C.16
make[1]: Leaving directory `BT-MZ'
```

- Specify the benchmark configuration
  - benchmark name: **bt-mz**, lu-mz, sp-mz
  - the benchmark class (S, W, A, B, C, D, E): CLASS=**C**
  - the number of MPI processes: NPROCS=**16**

Shortcut: `% make suite`

NPB-MZ-MPI / BT (Block Tridiagonal Solver)

- What does it do?
  - Solves a discretized version of the unsteady, compressible Navier-Stokes equations in three spatial dimensions
  - Performs 200 time-steps on a regular 3-dimensional grid
- Implemented in 20 or so Fortran77 source modules

- Uses MPI & OpenMP in combination
  - 16 processes each with 5 threads should be reasonable for 1 compute node of Goethe-HLR
  - bt-mz_C.16 should run in 9 seconds with the Intel + IntelMPI toolchain

NPB-MZ-MPI / BT Reference Execution

```
% cd bin
% cp ../jobscript/goethe-hlr/reference.sbatch .
% less reference.sbatch
% sbatch --reservation=VIHPS reference.sbatch

% cat npb_btmz.o<job_id>
 NAS Parallel Benchmarks (NPB3.3-MZ-MPI) - BT-MZ MPI+OpenMP Benchmark
 Number of zones:  16 x  16
 Iterations:  200    dt:    0.000100
 Number of active processes:     16
 Use the default load factors with threads
 Total number of threads:     80   (  5.0 threads/process)

Time step    1
 Time step   20
  [...]
 Time step  180
 Time step  200
 Verification Successful

 BT-MZ Benchmark Completed.
 Time in seconds = 9.00
```

- Copy jobscript and launch as a hybrid MPI+OpenMP application

Note: the thread binding settings (`OMP_PROC_BIND`, `OMP_PLACES`) in the batch script are specific to the Intel toolchain!

Hint: save the benchmark output (or note the run time) to be able to refer to it later
